The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 4.86 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 38 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific

markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Product name:

Allianz Global Equity Growth

Legal entity identifier: 5299007LC5RZOIZQJK05

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 37.46% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Equity Growth (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Relative) («KPI Strategy (Relative)») and promoted environmental characteristics by addressing greenhouse gas (GHG) Intensity. The «Sustainability KPI» measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company`s annual sales («GHG Intensity»). GHG Intensity was addressed by outperforming the Weighted Average GHG Intensity of the Sub-Fund against its benchmark. Until the 28.09.2023 the Sub-Fund promoted environmental characteristics through integrating the transition to a low carbon economy of the top 10 carbon emitting issuers as part of the Climate Engagement with Outcome Strategy (CEWO-Strategy).

In addition, sustainable minimum exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

Sustainability-indicators of the CEWO-Strategy as of 28.09.2023:

- The response rate (companies replied to the engagement questionnaire) of engagement with the top 15 emitters was 93% (the top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 15 emitters were identified)

- The change of the carbon footprint of the top 15 (for which the relevant information is available both for the base and reference years) emitters compared to the base year was +24,7% (CO2 emissions of the year 2019 compared to 2021).

- In case of investments in sovereign issuers, all sovereigns were evaluated by an SRI Rating.

Sustainability-indicators of the KPI Strategy as of 30.09.2023:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 97.59 %
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark was 87.34 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considers GHG related PAI indicators by outperforming the Weighted Average GHG Intensity against its benchmark.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

OPEX as financial metric is even less available . Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 10.97 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 25.05 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Sub-Fund has assigned the MSCI AC World (ACWI) Total Return Net as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by outperforming the benchmarks Weighted Average GHG Intensity

- **How did the reference benchmark differ from a broad market index?**
The benchmark is a broad market index.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The actual weighted average GHG Intensity portfolio was 87.34 % lower then weighted average GHG Intensity of the benchmark.

- How did this financial product perform compared with the reference benchmark?

01/10/2022 - 30/09/2023	Allianz Global Equity Growth	MSCI AC WORLD INDEX TOTAL RETURN (NET) IN USD	Active Return

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 34.46% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Equity Insights (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Absolute) («KPI Strategy (Absolute)») and promoted environmental characteristics by addressing greenhouse gas (GHG) intensity. The "Sustainability KPI" measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on a company`s annual sales («GHG Intensity»). GHG Intensity was addressed by ensuring a year-on-year improvement pathway of the weighted average GHG Intensity on portfolio level for the prospective fiscal year ends of the Sub-Fund.

However, since the Sub-Fund started to apply the «KPI Strategy (Absolute)» from the 29th September 2023 (date of the prospectus change), which was also the last valuation date before the end of the fiscal year of the Sub-Fund on 30th September, no intra-day decarbonization could be considered for this date.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 94.89 %

- The year-on-year improvement pathway of the Sub-Fund's Weighted Average GHG Intensity is used. However, since the «KPI Strategy (Absolute)» was onboarded on the 29th September 2023 (date of the prospectus change) being also last valuation date for the Fiscal year end, no intra-day decarbonization could be considered.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy. The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective. The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considered GHG related PAI indicators by ensuring a Weighted Average GHG Intensity improvement pathway.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector

- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

Largest investment	Sector	% Assets	Country
S.O.I.T.E.C.	MANUFACTURING	2.44 %	France
WHEATON PRECIOUS METALS CORP	MINING AND QUARRYING	2.25 %	Brazil

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

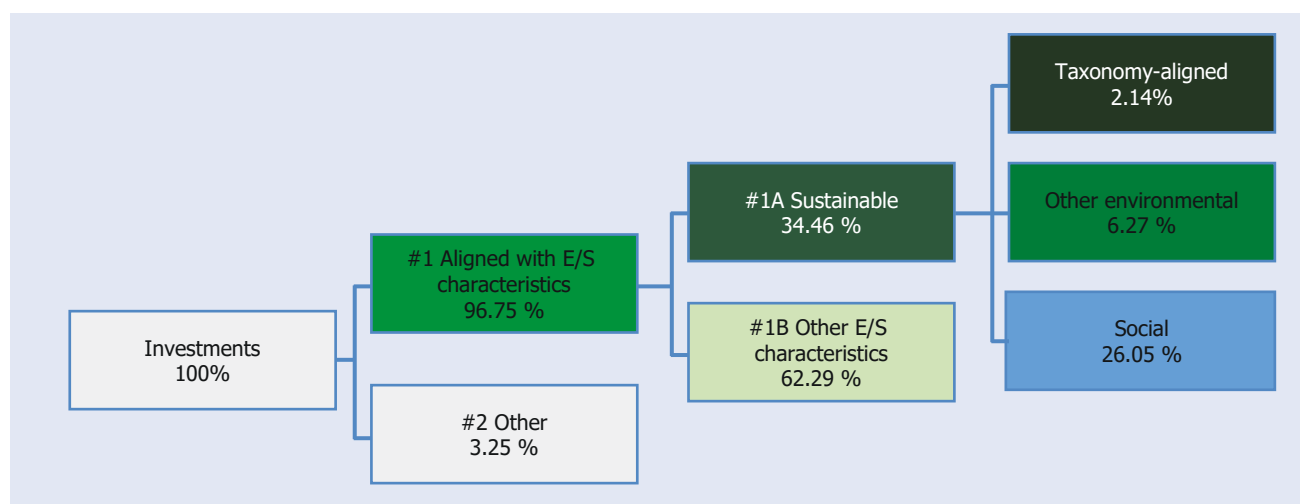

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	13.91 %
B06	Extraction of crude petroleum and natural gas	4.39 %
B07	Mining of metal ores	8.02 %
B09	Mining support service activities	1.50 %
C	MANUFACTURING	24.84 %

C10	Manufacture of food products	0.99 %
C11	Manufacture of beverages	0.87 %
C19	Manufacture of coke and refined petroleum products	1.34 %

M73	Advertising and market research	1.55 %
Other	NOT SECTORIZED	3.25 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 6.27 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 26.05 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Product name:

Allianz Global Equity Unconstrained

Legal entity identifier: 529900MK0JF6PD64Q806

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 34.79% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Equity Unconstrained (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Relative) («KPI Strategy (Relative)») and promoted environmental characteristics by addressing greenhouse gas (GHG) Intensity. The «Sustainability KPI» measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company`s annual sales («GHG Intensity»). GHG Intensity was addressed by outperforming the Weighted Average GHG Intensity of the Sub-Fund against its benchmark. Until the 28.09.2023 the Sub-Fund promoted environmental characteristics through integrating the transition to a low carbon economy of the top 10 carbon emitting issuers as part of the Climate Engagement with Outcome Strategy (CEWO-Strategy).

In addition, sustainable minimum exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

Sustainability-indicators of the CEWO-Strategy as of 28.09.2023:

- The response rate (companies replied to the engagement questionnaire) of engagement with the top 15 emitters was 73% (the top 10 carbon emitting issuers are determined periodically. Over the two reference dates Q4/2020, Q1/2022 and Q1/2023 the 15 emitters were identified)

- The change of the carbon footprint of the top 15 (for which the relevant information is available both for the base and reference years) emitters compared to the base year was +18,6% (CO2 emissions of the year 2019 compared to 2021).

- In case of investments in sovereign issuers, all sovereigns were evaluated by an SRI Rating. Sustainability-indicators of the KPI Strategy as of 30.09.2023:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 98 %
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark was 87.76 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considers GHG related PAI indicators by outperforming the Weighted Average GHG Intensity against its benchmark.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	40.88 %
C11	Manufacture of beverages	3.78 %
C14	Manufacture of wearing apparel	3.42 %
C20	Manufacture of chemicals and chemical products	1.36 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	6.23 %
C26	Manufacture of computer, electronic and optical products	15.98 %
C28	Manufacture of machinery and equipment n.e.c.	6.41 %
C32	Other manufacturing	3.70 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	10.04 %
G46	Wholesale trade, except of motor vehicles and motorcycles	3.68 %
G47	Retail trade, except of motor vehicles and motorcycles	6.36 %
J	INFORMATION AND COMMUNICATION	21.60 %
J58	Publishing activities	9.12 %
J62	Computer programming, consultancy and related activities	6.63 %
J63	Information service activities	5.85 %
K	FINANCIAL AND INSURANCE ACTIVITIES	20.96 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	4.17 %
K66	Activities auxiliary to financial services and insurance activities	16.79 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	4.26 %
N80	Security and investigation activities	4.26 %
Other	NOT SECTORIZED	2.26 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- In fossil gas
- In nuclear energy
- No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 5.79 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 28.88 %.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Sub-Fund has assigned the MSCI AC World (ACWI) Total Return Net as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by outperforming the benchmarks Weighted Average GHG Intensity

- **How did the reference benchmark differ from a broad market index?**
The benchmark is a broad market index.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual weighted average GHG Intensity portfolio was 87.76 % lower than weighted average GHG Intensity of the benchmark.

- **How did this financial product perform compared with the reference benchmark?**

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Global Floating Rate Notes Plus

Legal entity identifier: 529900QOOVX41NDJVJ51

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 11.72% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Floating Rate Notes Plus (the «Sub-Fund») promoted environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the investment process. This encompassed the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio. Until the 29.05.2023 the Sub-Fund promoted environmental characteristics through integrating the transition to a low carbon economy of the top 10 carbon emitting issuers as part of the Climate Engagement with Outcome Strategy (CEWO-Strategy). In addition, sustainable minimum exclusion criteria were applied. No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

Sustainability-indicators of the CEWO-Strategy as of 29.05.2023:

- The response rate (companies replied to the engagement questionnaire) of engagement with the top 21 emitters was 71% (the top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 21 emitters were identified)
- The change of the carbon footprint of the top 20 (for which the relevant information is available both for the base and reference years) emitters compared to the base year was -11,0% (CO2 emissions of the year 2019 compared to 2021).
- In case of investments in sovereign issuers, all sovereigns were evaluated by an SRI Rating.

Sustainability-indicators of the SRI BIC Strategy as of 30.09.2023:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio, in this respect, did not comprise on-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits))

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4) was 53.89 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies

- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund’s assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund’s investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered

aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- **What was the share of investments made in transitional and enabling activities?**

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 3.86 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 6.8 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or

Product name:

Allianz Global High Yield

Legal entity identifier: 549300Y1G08CCQCSWL61

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 28.17% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global High Yield (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") and promoted environmental characteristics by addressing greenhouse gas (GHG) Intensity. The "Sustainability KPI" measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company`s annual sales ("GHG Intensity"). GHG Intensity was addressed by outperforming the Weighted Average GHG Intensity of the Sub-Fund against its benchmark. Until 28.12.2022 the Sub-Fund promoted environmental characteristics through integrating the transition to a low carbon economy of the top 10 carbon emitting issuers as part of the Climate Engagement with Outcome Strategy (CEWO-Strategy).

In addition, sustainable minimum exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

Sustainability-indicators of the CEWO-Strategy as of 28.12.2022:

- The response rate (companies replied to the engagement questionnaire) of engagement with the top 17 emitters was 94% (the top 10 carbon emitting issuers are determined periodically. Over the two reference dates Q4/2020 and Q1/2022 the 17 emitters were identified)
 - The change of the carbon footprint of the top 13 (for which the relevant information is available both for the base and reference years) emitters compared to the base year was -7,9% (CO2 emissions of the year 2019 compared to 2021).
 - In case of investments in sovereign issuers, all sovereigns were evaluated by an SRI Rating.
- Sustainability-indicators of the KPI Strategy as of 30.09.2023:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 81.07 %
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark was 61.06 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considers GHG related PAI indicators by outperforming the Weighted Average GHG Intensity against its benchmark.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration,

mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

Other	NOT SECTORIZED	2.77 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

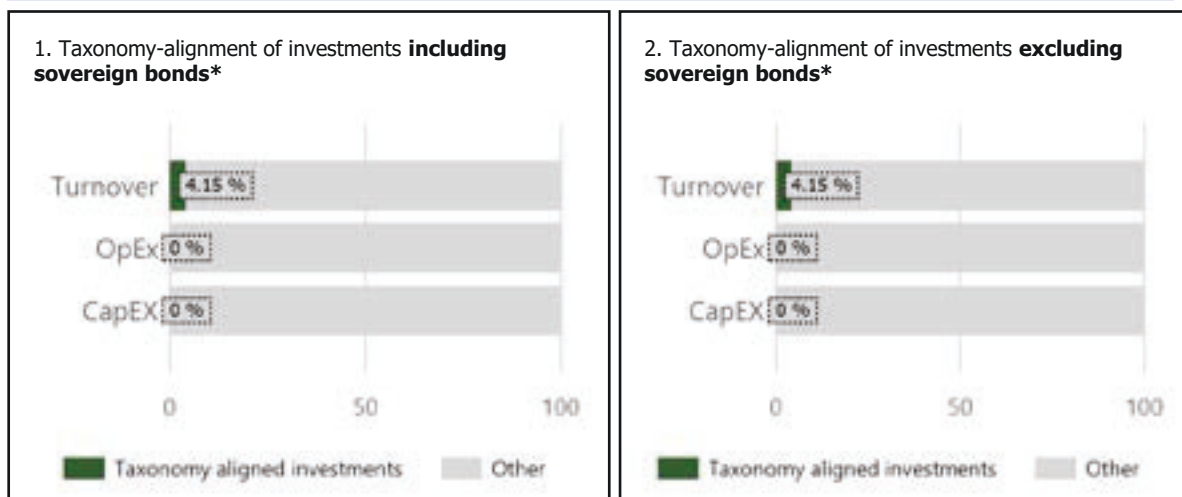

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Yes
 - In fossil gas
 - In nuclear energy
- No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 4.9 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 19.12 %.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Sub-Fund has assigned the ICE BOFAML Global High Yield Constrained (hedged) as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by outperforming the benchmarks Weighted Average GHG Intensity

- **How did the reference benchmark differ from a broad market index?**
The benchmark is a broad market index.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual weighted average GHG Intensity portfolio was 61.06 % lower then weighted average GHG Intensity of the benchmark.

- **How did this financial product perform compared with the reference benchmark?**

Reference benchmarks

are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Global Hi-Tech Growth

Legal entity identifier: 529900VB6HV6W8GMHM45

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 29.68% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Hi-Tech Growth (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Absolute) («KPI Strategy (Absolute)») and promoted environmental characteristics by addressing greenhouse gas (GHG) intensity. The "Sustainability KPI" measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on a company`s annual sales («GHG Intensity»). GHG Intensity was addressed by ensuring a year-on-year improvement pathway of the weighted average GHG Intensity on portfolio level for the prospective fiscal year ends of the Sub-Fund.

However, since the Sub-Fund started to apply the «KPI Strategy (Absolute)» from the 29th September 2023 (date of the prospectus change), which was also the last valuation date before the end of the fiscal year of the Sub-Fund on 30th September, no intra-day decarbonization could be considered for this date.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 95.07 %
- The year-on-year improvement pathway of the Sub-Fund's Weighted Average GHG Intensity is used. However, since the Sub-Fund started to apply the «KPI Strategy (Absolute)» from the 29th September 2023 (date of the prospectus change), which was also the last valuation date before the end of the fiscal year of the Sub-Fund on 30th September, no intra-day

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

decarbonization could be considered for this date.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considered GHG related PAI indicators by ensuring a Weighted Average GHG Intensity improvement pathway.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies

- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

-------	----------------	--------

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- [What was the share of investments made in transitional and enabling activities?](#)

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 13.77 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 15.58 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-

based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable
- How did this financial product perform compared with the reference benchmark?
Not applicable

Not applicable

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Global Inflation-Linked Bond

Legal entity identifier: 529900LYBSN4YHEH3K96

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Inflation-Linked Bond (the «Sub-Fund») promoted environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the investment process. This encompassed the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the as the Sub-Fund does not use a sustainability benchmark nor has defined its binding elements in comparison to the benchmark. However, sustainability indicators are partly reported in comparison to the benchmark in order to increase the informative value.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of the Sub-Funds Portfolio (Portfolio, in this respect, did not comprise on-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4) was 94.57 %
- The actual percentage of the benchmark invested in best-in-class issuers was 100 %
- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
K	FINANCIAL AND INSURANCE ACTIVITIES	2.00 %
K64	Financial service activities, except insurance and pension funding	1.16 %
K66	Activities auxiliary to financial services and insurance activities	0.84 %
O	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	94.57 %
O84	Public administration and defence; compulsory social security, from which:	94.57 %
O84.1	Administration of the State and the economic and social policy of the community	94.57 %
Other	NOT SECTORIZED	3.43 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 94.57 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 0 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 0 %.

What investments were included under "#2 Other", what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable
- How did this financial product perform compared with the reference benchmark?
Not applicable
- How did this financial product perform compared with the broad market index?
Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Global Intelligent Cities Income

Legal entity identifier: 529900FV8TUP35Z9PD66

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 44.92% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Intelligent Cities Income (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") and promoted environmental characteristics by addressing greenhouse gas (GHG) Intensity. The "Sustainability KPI" measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company`s annual sales ("GHG Intensity"). GHG Intensity was addressed by outperforming the Weighted Average GHG Intensity of the Sub-Fund against its benchmark.

In addition, sustainable minimum exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 96.22 %
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark was 34.77 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considers GHG related PAI indicators by outperforming the Weighted Average GHG Intensity against its benchmark.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

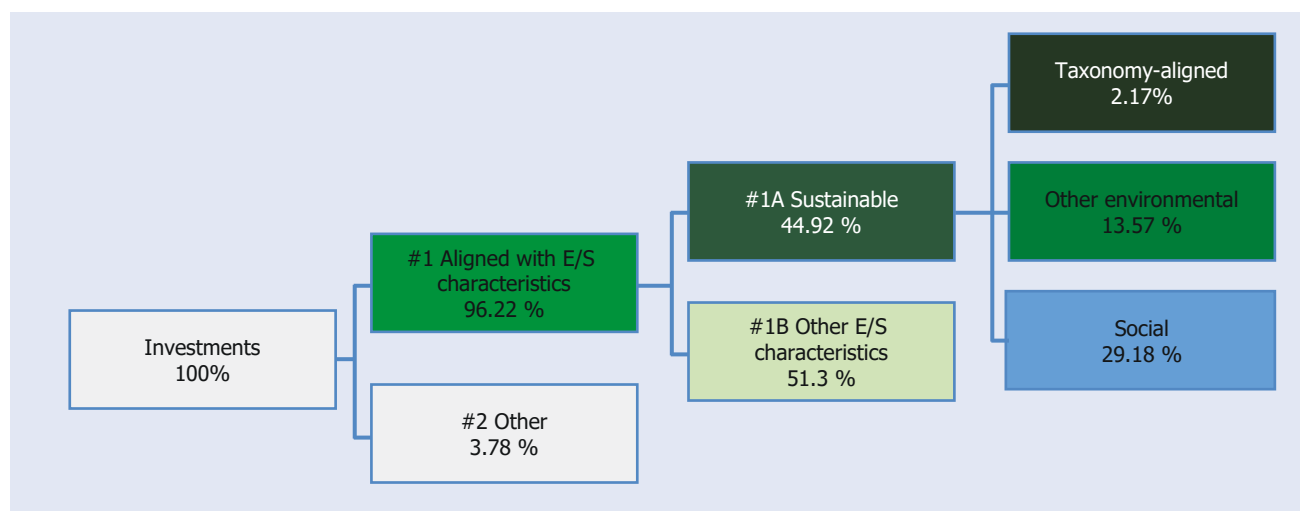

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority

of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	44.87 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- **What was the share of investments made in transitional and enabling activities?**

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 13.57 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 29.18 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings,

controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Sub-Fund has assigned a composite benchmark 70% MSCI AC World (ACWI) Total Return Net + 30% ICE BOFAML US Corporate & High Yield Index. This composite benchmark is using market indices. The Sub-Fund will promote environmental and social characteristics by outperforming the benchmarks Weighted Average GHG Intensity

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did the reference benchmark differ from a broad market index?**
The composite benchmark uses broad market indices.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual weighted average GHG Intensity portfolio was 34.77 % lower then weighted average GHG Intensity of the benchmark.

Product name:

Allianz Global Multi Asset Sustainability Balanced

Legal entity identifier: 549300IVJKX5A2N0KP64

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 25.74% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Multi Asset Sustainability Balanced (the «Sub-Fund») promoted a broad range of environmental and/or social characteristics through investing at least 70 % of its assets following the «Multi Asset Sustainability Strategy» which includes, but is not limited to, various sustainability strategies and/or, invests in Green Bonds and/or SFDR Article 8 & 9 Target Funds («SFDR Target Funds»). SFDR Target Funds are target funds whose objective it is to promote environmental or social characteristics or Sustainable Investments in accordance with Art. 8 or Art. 9 of the Sustainable Finance Disclosure Regulation.

The promoted environmental and/or social characteristics comprised depending on the sustainability strategy selected by the Investment Manager environmental, social, human rights, governance, business behaviour factors or investments in companies providing solutions that create positive environmental and social outcomes.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics sustainability indicators are used which performed as follows:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds, and/or in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy was 92 %.

- Where the Investment Manager decided to directly invest in Debt or Equity Securities as part of the Multi Asset Sustainability Strategy, the investments adhered to the binding element of

the sustainability strategy.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector

- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 30.77 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available . Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 5.61 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 19.05 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks

are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Allianz Global Multi Asset Sustainability Conservative

Product name:

Allianz Global Multi Asset Sustainability Conservative

Legal entity identifier: 549300P41LEQN4RDYC38

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 19.2% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Multi Asset Sustainability Conservative (the «Sub-Fund») promoted a broad range of environmental and/or social characteristics through investing at least 70 % of its assets following the «Multi Asset Sustainability Strategy» which includes, but is not limited to, various sustainability strategies and/or, invests in Green Bonds and/or Social Bonds, and/or Sustainability Bonds, and/or SFDR Article 8 & 9 Target Funds («SFDR Target Funds»). SFDR Target Funds are target funds whose objective it is to promote environmental or social characteristics or Sustainable Investments in accordance with Art. 8 or Art. 9 of the Sustainable Finance Disclosure Regulation.

The promoted environmental and/or social characteristics comprised depending on the sustainability strategy selected by the Investment Manager environmental, social, human rights, governance, business behaviour factors or investments in companies providing solutions that create positive environmental and social outcomes.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics sustainability indicators are used which performed as follows:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds, and/or Social Bonds, and/or Sustainability Bonds and/or in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy was 93.12 %.

- Where the Investment Manager decided to directly invest in Debt or Equity Securities as part of the Multi Asset Sustainability Strategy, the investments adhered to the binding element of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

the sustainability strategy.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector

- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the

investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 46.91 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

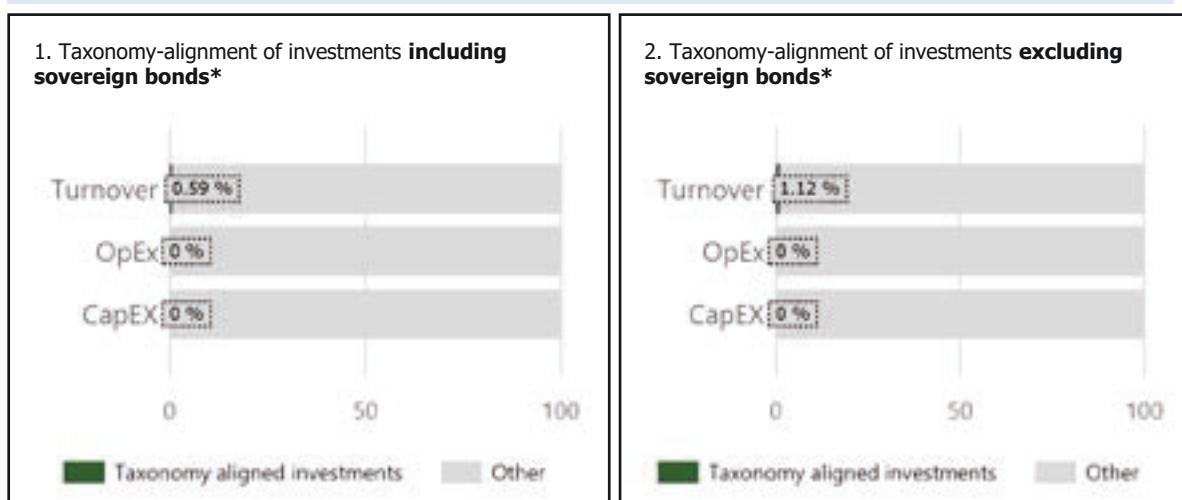

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- **What was the share of investments made in transitional and enabling activities?**

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.32 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 11.28 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings,

controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did this financial product perform compared with the broad market index?
Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Global Multi Asset Sustainability Growth

Legal entity identifier: 549300YXK62SBLFWYH24

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 31.76% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Multi Asset Sustainability Growth (the «Sub-Fund») promoted a broad range of environmental and/or social characteristics through investing at least 70 % of its assets following the «Multi Asset Sustainability Strategy» which includes, but is not limited to, various sustainability strategies and/or, invests in Green Bonds and/or Social Bonds, and/or Sustainability Bonds, and/or SFDR Article 8 & 9 Target Funds («SFDR Target Funds»). SFDR Target Funds are target funds whose objective it is to promote environmental or social characteristics or Sustainable Investments in accordance with Art. 8 or Art. 9 of the Sustainable Finance Disclosure Regulation.

The promoted environmental and/or social characteristics comprised depending on the sustainability strategy selected by the Investment Manager environmental, social, human rights, governance, business behaviour factors or investments in companies providing solutions that create positive environmental and social outcomes.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics sustainability indicators are used which performed as follows:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds, and/or Social Bonds, and/or Sustainability Bonds and/or in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy was 91.94 %.

- Where the Investment Manager decided to directly invest in Debt or Equity Securities as part of the Multi Asset Sustainability Strategy, the investments adhered to the binding element of

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

the sustainability strategy.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector

- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 19.54 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

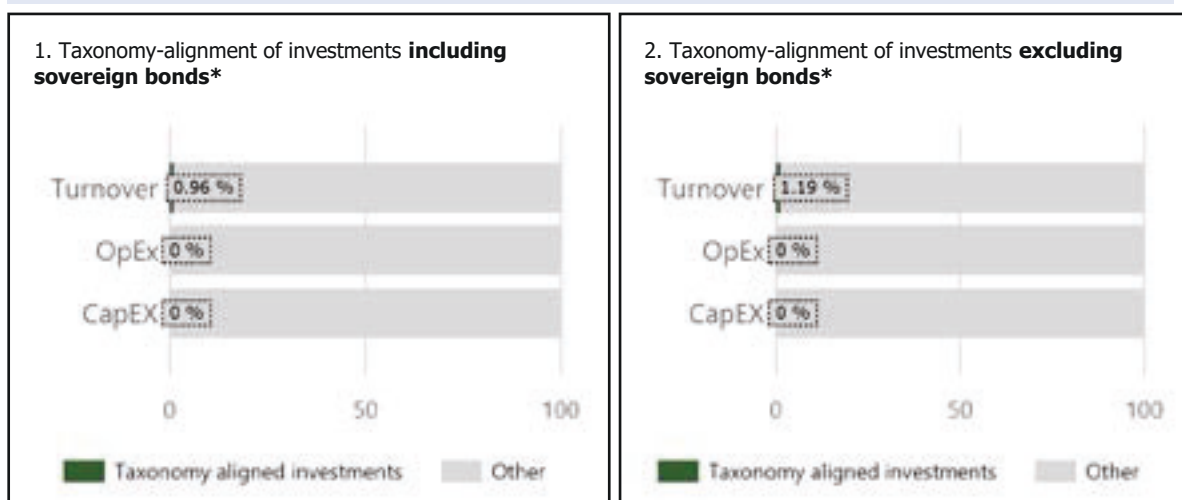

Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available . Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
 - In fossil gas
 - In nuclear energy
- No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.09 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 23.71 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Product name:

Allianz Global Multi-Asset Credit

Legal entity identifier: 549300KHQG2E3AS5HS50

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 20.34% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Multi-Asset Credit (the «Sub-Fund») promoted environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the investment process. This encompassed the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio, in this respect, did not comprise on-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4) was 66.11 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the

environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

government bonds.

The share of investments in sovereigns was 1.49 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available . Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
 - In fossil gas
 - In nuclear energy
- No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 6.76 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 12.04 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks

are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable
- How did this financial product perform compared with the reference benchmark?

Product name:

Allianz Global Multi-Asset Credit SRI

Legal entity identifier: 529900DL5GK0L1U4FS47

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 33.07% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Multi-Asset Credit SRI (the «Sub-Fund») promoted environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the investment process. This encompassed the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply and Sub-Fund specific exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio, in this respect, did not comprise on-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4) was 80.33 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments were applied:

-Sub-Fund assets may not be invested in Debt Securities of issuers which provide services in relation to tobacco of more than 10% of their revenues.
 -Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of gambling and/or pornography and/or which are involved in the distribution/sales of gambling and/or pornography of more than 10% of their revenues and/or which provide services in relation to gambling and/or pornography of more than 10% of their revenues.
 -Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of non-conventional oil and gas and/or which provide services in relation to non-conventional oil and gas of more than 10% of their revenues.
 -Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of alcohol and/or which are involved in the distribution/sales of alcohol of more than 10% of their revenues and/or which provide services in relation to alcohol of more than 20% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria, are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy. The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective. The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were, among other sustainability factors, applied to derive the SRI Rating.

The SRI Rating is used for the portfolio construction.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency

on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 1.22 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 12.95 %.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 17.71 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable
- How did this financial product perform compared with the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable

- How did this financial product perform compared with the broad market index?

Not applicable

Product name:

Allianz Global Sustainability

Legal entity identifier: 529900W68IN4IJ546R85

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Sustainability (the «Sub-Fund») promoted environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the investment process. This encompassed the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply and Sub-Fund specific exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of the Sub-Funds Portfolio (Portfolio, in this respect, did not comprise on-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4) was 75.16 %

- The actual percentage of the benchmark invested in best-in-class issuers was 80.27 %

- The Sub-Fund adhered to a 20 % reduction of investment universe

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments apply:
Sub-Fund assets have not been invested in Equities that generate a share of more than 5% of its revenues in the sectors (i) alcohol, (ii) armament, (iii) gambling, and (iv) pornography.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria, are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy. The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective. The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water

- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority

of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- **What was the asset allocation?**

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **In which economic sectors were the investments made?**

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	3.31 %
B06	Extraction of crude petroleum and natural gas	2.40 %
B07	Mining of metal ores	0.91 %
C	MANUFACTURING	38.85 %
C10	Manufacture of food products	1.67 %
C11	Manufacture of beverages	2.58 %
C16	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	1.17 %
C17	Manufacture of paper and paper products	1.22 %
C20	Manufacture of chemicals and chemical products	3.55 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	9.43 %
C24	Manufacture of basic metals	1.55 %
C25	Manufacture of fabricated metal products, except machinery and equipment	0.94 %
C26	Manufacture of computer, electronic and optical products	7.96 %
C28	Manufacture of machinery and equipment n.e.c.	8.78 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	2.41 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	2.41 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	1.80 %
G46	Wholesale trade, except of motor vehicles and motorcycles	1.80 %

K	FINANCIAL AND INSURANCE ACTIVITIES	23.05 %
K64	Financial service activities, except insurance and pension funding	3.67 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	8.67 %
K66	Activities auxiliary to financial services and insurance activities	10.70 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	2.30 %
N80	Security and investigation activities	2.30 %
Other	NOT SECTORIZED	2.94 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 8.12 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 36.62 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Sub-Fund has assigned the DOW JONES Sustainability World Index (Total Return) as benchmark

- How did the reference benchmark differ from a broad market index?

The benchmark uses a best-in-class approach based on ESG criteria for index construction.

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

- The actual percentage of the Sub-Fund's Portfolio (Portfolio, in this respect, did not comprise on-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4) was 75.16 %

- The actual percentage of the benchmark invested in best-in-class issuers was {bmSustIndSriBic} %

- How did this financial product perform compared with the reference benchmark?

01/10/2022 - 30/09/2023	Allianz Global Sustainability	DOW JONES SUSTAINABILITY WORLD Total Return net	Active Return
Performance %	11.54	14.3	-2.76

- How did this financial product perform compared with the broad market index?

01/10/2022 - 30/09/2023	Allianz Global Sustainability	DOW JONES SUSTAINABILITY WORLD Total Return net	Active Return
Performance %	11.54	14.3	-2.76

Product name:

Allianz Global Water

Legal entity identifier: 529900NQRL4PJUZL0R84

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 73.89% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Water (the «Sub-Fund») invested in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

• How did the sustainability indicators perform?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives was 73.89 %
- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were considered as part of the requirement to invest into Sustainable Investments. PAI indicators were used as part of the DNSH assessment. Investments in securities of issuers who did not pass the DNSH assessment were not counted as Sustainable Investments.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

Largest investment	Sector	% Assets	Country
AMERICAN WATER WORKS CO INC	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	5.53 %	USA
XYLEM INC	MANUFACTURING	4.79 %	USA

IDEX CORP	MANUFACTURING	3.94 %	USA
GEBERIT AG-REG	MANUFACTURING	3.92 %	Switzerland
FRANKLIN ELECTRIC CO INC	MANUFACTURING	3.72 %	USA
WASTE MANAGEMENT INC	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	3.68 %	USA
PENTAIR PLC	MANUFACTURING	3.53 %	USA
FISCHER (GEORG)-REG	MANUFACTURING	3.32 %	Switzerland
WATTS WATER TECHNOLOGIES-A	MANUFACTURING	3.10 %	USA
DEERE & CO	MANUFACTURING	3.07 %	USA
STANTEC INC	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	2.91 %	Canada

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority

of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable

- How did this financial product perform compared with the reference benchmark?

Not applicable

- How did this financial product perform compared with the broad market index?

Not applicable

Product name:

Allianz Green Future

Legal entity identifier: 5299000ME98AQUG1H594

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 49.32% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Green Future (the «Sub-Fund») promoted a broad range of environmental and/or social characteristics through investing at least 90 % of its assets following the «Multi Asset Sustainability Strategy» which includes, but is not limited to, various sustainability strategies and/or, invests in Green Bonds and/or Social Bonds, and/or Sustainability Bonds, and/or SFDR Article 8 & 9 Target Funds («SFDR Target Funds»). SFDR Target Funds are target funds whose objective it is to promote environmental or social characteristics or Sustainable Investments in accordance with Art. 8 or Art. 9 of the Sustainable Finance Disclosure Regulation.

The promoted environmental and/or social characteristics comprised depending on the sustainability strategy selected by the Investment Manager environmental, social, human rights, governance, business behaviour factors or investments in companies providing solutions that create positive environmental and social outcomes.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics sustainability indicators are used which performed as follows:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds, and/or Social Bonds, and/or Sustainability Bonds and/or in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy was 97.55 %.

- Where the Investment Manager decided to directly invest in Debt or Equity Securities as part of the Multi Asset Sustainability Strategy, the investments adhered to the binding element of

the sustainability strategy.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector

- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

Largest investment	Sector	% Assets	Country
ALLIANZ GREEN BOND-W EUR	N/A	17.05 %	Luxembourg
ALLIANZ GLB SUSTAINBTY-WTEUR	N/A	11.24 %	Luxembourg
ALLIANZ ADVAN FI EUR-WT EUR	N/A	8.20 %	Luxembourg
ALLIANZ EM MK SRI B-WT H2 EU	N/A	8.01 %	Luxembourg
ALLIANZ-BE STY SRI GB EQ-WTE	N/A	6.04 %	Luxembourg

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

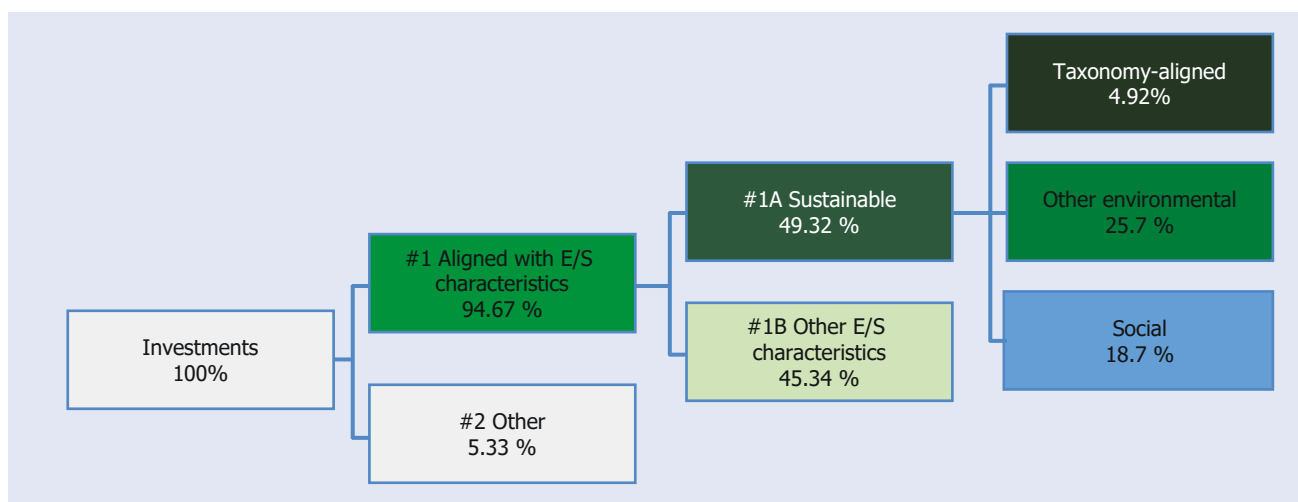

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- **What was the asset allocation?**

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 17.11 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

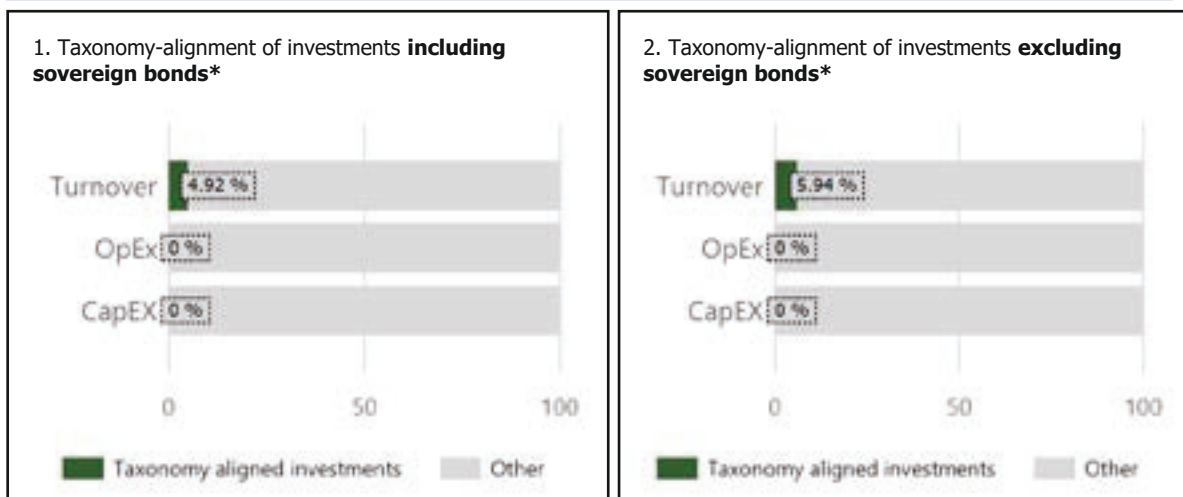

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 25.7 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 18.7 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Product name:

Allianz Green Transition Bond

Legal entity identifier: 529900QSKNARO960RK57

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

 Yes No It made **sustainable investments with an environmental objective**: _% It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 55.21% of sustainable investments in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective It made **sustainable investments with a social objective**: _% It promoted E/S characteristics, but **did not make any sustainable investments****To what extent were the environmental and/or social characteristics promoted by this financial product met?**

Allianz Green Transition Bond (the «Sub-Fund») promoted environmental and/or social characteristics through the mobilization of capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change. The Sub-Fund invested primarily in Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects, in Debt Securities whose issuers were committed to future improvements in sustainability outcomes and in Debt Securities issued by sovereign issuers which have bindingly ratified the Paris Agreement.

In addition, sustainable minimum exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of the Sub-Fund's assets invested in green transition related assets was 72.675 %. This comprises Green Bonds; and issuers explicitly committing to future improvements in sustainability outcomes with a predefined timeline, including but not limited to issuers participating in the Science Based Target (SBT) initiative; as well as Sovereign issuers which have bindingly ratified the Paris Agreement, and have a sufficient Freedom House Index score. Issuers taking part to the SBT initiative commit defined targets to reduce greenhouse gas (GHG) emissions in line with the agreement as of April 2016 within the United Nations Framework Convention on Climate Change (UNFCCC), on climate change mitigation, adaption, and finance (the "Paris Agreement").

- The Sub-Fund adhered to a minimum SRI Rating of 1 for Green Bonds & SBTi issuers held in

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

the portfolio (out of a scale from 0-4; 0 being the worst rating and 4 the best rating).

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments were applied:

- Sovereign issuers qualified with a score as "Not Free" by the Freedom House Index
- Sovereign issuers that have not ratified the Paris agreement.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria, are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the GHG Intensity PAI indicator were considered for sovereign issuers as sovereigns, which have not bindingly ratified the Paris Agreement, are not investable.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies

- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

Largest investment	Sector	% Assets	Country
UNITED MEXICAN STATES FIX 2.659% 24.05.2031	Administration of the State and the economic and social policy of the community (O84.1)	2.71 %	Mexico

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 36.31 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

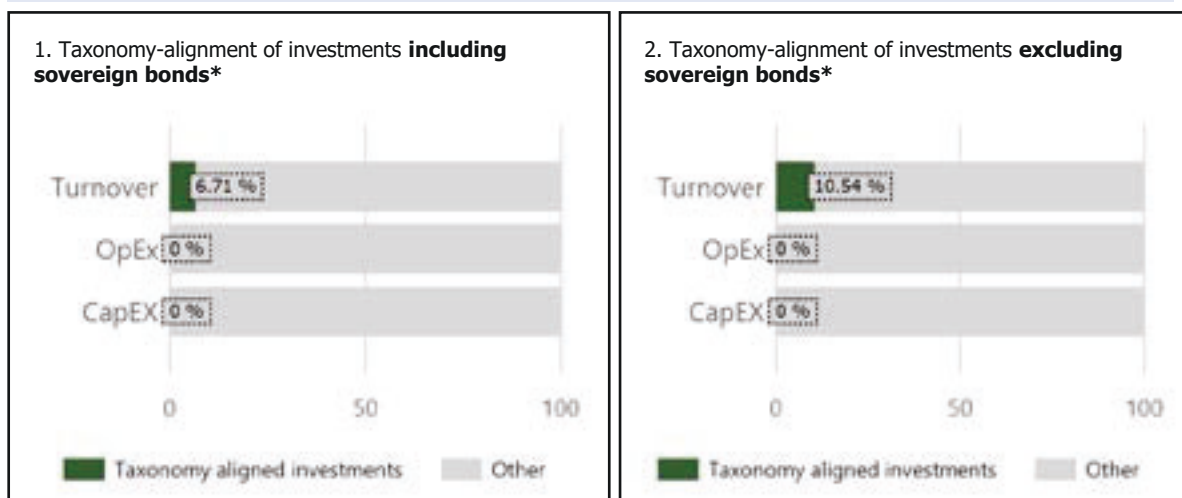

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 39.39 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 9.1 %.

What investments were included under "#2 Other", what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Sub-Fund has assigned 1/3 BLOOMBERG MSCI Global Green Bond Total Return (hedged into USD) + 1/3 BLOOMBERG MSCI Global Corporate Sustainability Total Return (hedged into USD) + 1/3 J.P. MORGAN ESG Emerging Market Bond (EMBI) Global Diversified as composite benchmark.

- **How did the reference benchmark differ from a broad market index?**
Those benchmarks use either ESG criteria for index construction or focus on green bonds.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Sub-Fund's sustainability performance is not measured against the benchmark. The Sub-Fund hasn't defined any sustainability indicators in order to compare the alignment of the benchmark with the environmental and social characteristics of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz High Dividend Asia Pacific Equity

Legal entity identifier: 549300NMGJFNXMUMPO08

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 37.44% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz High Dividend Asia Pacific Equity (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") and promoted environmental characteristics by addressing greenhouse gas (GHG) Intensity. The "Sustainability KPI" measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company`s annual sales ("GHG Intensity"). GHG Intensity was addressed by outperforming the Weighted Average GHG Intensity of the Sub-Fund against its benchmark.

In addition, sustainable minimum exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 91.21 %

- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark was 65.56 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considers GHG related PAI indicators by outperforming the Weighted Average GHG Intensity against its benchmark.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

Largest investment	Sector	% Assets	Country
TENCENT HOLDINGS LTD	INFORMATION AND COMMUNICATION	4.65 %	People's Republic of China
SAMSUNG ELECTRONICS CO LTD	MANUFACTURING	2.90 %	South Korea

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	1.34 %
B06	Extraction of crude petroleum and natural gas	1.34 %
C	MANUFACTURING	34.87 %

C10	Manufacture of food products	0.90 %
C14	Manufacture of wearing apparel	1.05 %
C15	Manufacture of leather and related products	1.44 %
C16	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	1.62 %
C19	Manufacture of coke and refined petroleum products	3.23 %
C20	Manufacture of chemicals and chemical products	1.79 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.91 %
C23	Manufacture of other non-metallic mineral products	0.46 %
C26	Manufacture of computer, electronic and optical products	17.02 %

N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	1.38 %
N77	Rental and leasing activities	1.38 %
Other	NOT SECTORIZED	3.78 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
-------------------------	--------

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Enabling activities

0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 12.69 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 24.74 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio

investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Sub-Fund has assigned the MSCI AC Asia Pacific Excl. Japan Total Return Net as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by outperforming the benchmarks Weighted Average GHG Intensity

- How did the reference benchmark differ from a broad market index?

The benchmark is a broad market index.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The actual weighted average GHG Intensity portfolio was 65.56 % lower than weighted average GHG Intensity of the benchmark.

- How did this financial product perform compared with the reference benchmark?

01/10/2022 - 30/09/2023	Allianz High Dividend Asia Pacific Equity	MSCI AC Asia Pacific ex Japan Total Return (Net)	Active Return
Performance %	0.22	3.26	-3.04

- How did this financial product perform compared with the broad market index?

01/10/2022 - 30/09/2023	Allianz High Dividend Asia Pacific Equity	MSCI AC Asia Pacific ex Japan Total Return (Net)	Active Return
Performance %	0.22	3.26	-3.04

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Japan Equity

Legal entity identifier: 529900D7K4CJB8ABAW87

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 32.79% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Japan Equity (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Relative) («KPI Strategy (Relative)») and promoted environmental characteristics by addressing greenhouse gas (GHG) Intensity. The «Sustainability KPI» measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company`s annual sales («GHG Intensity»). GHG Intensity was addressed by outperforming the Weighted Average GHG Intensity of the Sub-Fund against its benchmark. Until the 29.05.2023 the Sub-Fund promoted environmental characteristics through integrating the transition to a low carbon economy of the top 10 carbon emitting issuers as part of the Climate Engagement with Outcome Strategy (CEWO-Strategy). In addition, sustainable minimum exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

• How did the sustainability indicators perform?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

Sustainability-indicators of the CEWO-Strategy as of 29.05.2023:

- The response rate (companies replied to the engagement questionnaire) of engagement with the top 19 emitters was 84% (the top 10 carbon emitting issuers are determined periodically. Over the two reference dates Q4/2020 and Q1/2022 the 19 emitters were identified)
- The change of the carbon footprint of the top 19 (for which the relevant information is available both for the base and reference years) emitters compared to the base year was -11,5% (CO2 emissions of the year 2019 compared to 2021).
- In case of investments in sovereign issuers, all sovereigns were evaluated by an SRI Rating.

Sustainability-indicators of the KPI Strategy as of 30.09.2023:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 93.2 %

- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark was 33.99 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considers GHG related PAI indicators by outperforming the Weighted Average GHG Intensity against its benchmark.

The following PAI indicators were considered:

- GHG emissions

- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 5.13 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 26.05 %.

What investments were included under "#2 Other", what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Sub-Fund has assigned the TOPIX Total Return Net as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by outperforming the benchmarks Weighted Average GHG Intensity

- How did the reference benchmark differ from a broad market index?

The benchmark is a broad market index.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The actual weighted average GHG Intensity portfolio was 33.99 % lower than weighted average GHG Intensity of the benchmark.

- How did this financial product perform compared with the reference benchmark?

01/10/2022 - 30/09/2023	Allianz Japan Equity	TOPIX INDEX RETURN IN USD	Active Return
Performance %	23.26	25.9	-2.64

- How did this financial product perform compared with the broad market index?

01/10/2022 - 30/09/2023	Allianz Japan Equity	TOPIX INDEX RETURN IN USD	Active Return
Performance %	23.26	25.9	-2.64

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Pet and Animal Wellbeing

Legal entity identifier: 529900WR8ULGAFRMO518

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 59.86% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Pet and Animal Wellbeing (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") which targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

Furthermore, the Sub-Fund limited its allocation into issuers which significantly harm environmental and/or social objectives.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 97.15 %.
- The actual weighted average sustainable investment share of Sub-Fund Assets was 59.86 %.
- The actual share of investments not satisfying the Do No Significant Harm («DNSH») assessment of Sub-Fund Assets was 3.54 %.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy. The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective. The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considered PAI indicators by limiting its allocation into issuers which significantly harm environmental and/or social objectives.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas

- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

Largest investment	Sector	% Assets	Country
TRACTOR SUPPLY COMPANY	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	6.61 %	USA
IDEXX LABORATORIES INC	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	6.41 %	USA
ZOETIS INC	MANUFACTURING	5.72 %	USA
MERCK & CO. INC.	MANUFACTURING	5.14 %	USA
PETS AT HOME GROUP PLC	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	4.61 %	United Kingdom
DECHRA PHARMACEUTICALS PLC	MANUFACTURING	4.30 %	United Kingdom
CVS GROUP PLC	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	3.94 %	United Kingdom
JM SMUCKER CO/THE	MANUFACTURING	3.77 %	USA
GENERAL MILLS INC	MANUFACTURING	3.70 %	USA
UNICHARM CORP	MANUFACTURING	3.61 %	Japan
VIRBAC SA	MANUFACTURING	3.60 %	France

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance

qualifications.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	64.70 %
C10	Manufacture of food products	16.78 %
C11	Manufacture of beverages	3.55 %

K66	Activities auxiliary to financial services and insurance activities	0.05 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	11.58 %
M72	Scientific research and development	1.63 %
M75	Veterinary activities	9.94 %
Other	NOT SECTORIZED	0.77 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 0 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 59.84 %.

What investments were included under "#2 Other", what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach).

Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable
- How did this financial product perform compared with the reference benchmark?
Not applicable
- How did this financial product perform compared with the broad market index?
Not applicable

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Positive Change

Legal entity identifier: 529900BL3ET622OAUC93

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 85.85% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Positive Change (the «Sub-Fund») invested in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives was 85.85 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),

- securities issued by companies that derive more than 10% of their revenues from weapons,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

military equipment, and services,

- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were considered as part of the requirement to invest into Sustainable Investments. PAI indicators were used as part of the DNSH assessment. Investments in securities of issuers who did not pass the DNSH assessment were not counted as Sustainable Investments.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

Largest investment	Sector	% Assets	Country
WASTE MANAGEMENT INC	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	2.82 %	USA
AIA GROUP LTD	FINANCIAL AND INSURANCE ACTIVITIES	2.72 %	Hong Kong
THERMO FISHER SCIENTIFIC INC	MANUFACTURING	2.62 %	USA
BRAMBLES LTD	MANUFACTURING	2.58 %	Australia
XYLEM INC	MANUFACTURING	2.50 %	USA
DEERE & CO	MANUFACTURING	2.49 %	USA
INTUIT INC	INFORMATION AND COMMUNICATION	2.48 %	USA
SSE PLC	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	2.41 %	United Kingdom
ENEL SPA	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	2.41 %	Italy
VERTEX PHARMACEUTICALS INC	MANUFACTURING	2.38 %	USA
IDEX CORP	MANUFACTURING	2.35 %	USA
ORSTED A/S	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	2.27 %	Denmark
AMERICAN WATER WORKS CO INC	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	2.18 %	USA
HCA HEALTHCARE INC	HUMAN HEALTH AND SOCIAL WORK ACTIVITIES	2.17 %	USA
ALSTOM	MANUFACTURING	2.11 %	France

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	1.83 %
B07	Mining of metal ores	1.83 %
C	MANUFACTURING	62.60 %
C10	Manufacture of food products	8.13 %
C16	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	2.70 %
C17	Manufacture of paper and paper products	3.35 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	7.01 %
C24	Manufacture of basic metals	3.67 %
C26	Manufacture of computer, electronic and optical products	20.77 %
C28	Manufacture of machinery and equipment n.e.c.	13.34 %
C30	Manufacture of other transport equipment	2.16 %
C32	Other manufacturing	1.47 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	8.02 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	8.02 %
E	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	5.19 %
E36	Water collection, treatment and supply	2.15 %
E38	Waste collection, treatment and disposal activities; materials recovery	3.04 %
F	CONSTRUCTION	1.82 %
F42	Civil engineering	1.82 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	2.01 %
G46	Wholesale trade, except of motor vehicles and motorcycles	2.01 %

K	FINANCIAL AND INSURANCE ACTIVITIES	6.91 %
K64	Financial service activities, except insurance and pension funding	1.82 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	2.50 %
K66	Activities auxiliary to financial services and insurance activities	2.59 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	2.83 %
M71	Architectural and engineering activities; technical testing and analysis	1.75 %
M72	Scientific research and development	1.07 %
Q	HUMAN HEALTH AND SOCIAL WORK ACTIVITIES	4.14 %
Q86	Human health activities	4.14 %
Other	NOT SECTORIZED	0.48 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 23.38 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 54.77 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz SDG Global Equity

Legal entity identifier: 529900TZLZ3XIEIHC86

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 71.96% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz SDG Global Equity (the «Sub-Fund») invested in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria apply and Sub-Fund specific exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives was 71.96 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments were applied:

- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of hydraulic fracturing and/or which provide services in relation to hydraulic fracturing of more than 5% of their revenues,
- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of alcohol (limited to spirits) of more than 10% of their revenues,
- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of agricultural genetically modified organisms -GMOs- of more than 5% of their revenues,
- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of nuclear power and/or which provide services in relation to nuclear power of more than 10% of their revenues,
- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of arctic drilling,
- Sub-Fund assets may not be invested in Equities of issuers which are involved in the production of gambling and/or which are involved in the distribution/sales of gambling and/or which provide services in relation to gambling of more than 5% of their revenues,
- Sub-Fund assets may not be invested in Equities of issuers which are involved in the production and/or exploration of oil sands of more than 5% of their revenues,
- Sub-Fund assets may not be invested in Equities of issuers which are involved in the production of military equipment and services and/or which are involved in the distribution/sales of military equipment and services and/or which provide services in relation to military equipment and services of more than 5% of their revenues,
- Sub-Fund assets may not be invested in Equities of issuers which are involved in the production of pornography of more than 1% of their revenues and/or which are involved in the distribution/sales of pornography of more than 1% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria are based on information from an external data provider and coded in pre- and post-trade

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles

and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were considered as part of the requirement to invest into Sustainable Investments. PAI indicators were used as part of the DNSH assessment. Investments in securities of issuers who did not pass the DNSH assessment were not counted as Sustainable Investments.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund’s assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund’s investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the

investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 15.04 %.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 48.14 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable
- How did this financial product perform compared with the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable

- How did this financial product perform compared with the broad market index?

Not applicable

Product name:

Allianz Selective Global High Income

Legal entity identifier: 549300GJL672LFNCCQ34

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 34.1% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Selective Global High Income (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") and promoted environmental characteristics by addressing greenhouse gas (GHG) Intensity. The "Sustainability KPI" measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company`s annual sales ("GHG Intensity"). GHG Intensity was addressed by outperforming the Weighted Average GHG Intensity of the Sub-Fund against its benchmark.

In addition, sustainable minimum exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 88.1 %
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark was 87.11 %
- The Sub-Fund adhered to a 20 % reduction of investment universe
- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considers GHG related PAI indicators by outperforming the Weighted Average GHG Intensity against its benchmark.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	5.43 %
	B06 Extraction of crude petroleum and natural gas	2.64 %
	B07 Mining of metal ores	0.61 %
	B09 Mining support service activities	2.18 %

S	OTHER SERVICE ACTIVITIES	1.01 %
S96	Other personal service activities	1.01 %
Other	NOT SECTORIZED	2.00 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.5 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 20.52 %.

What investments were included under "#2 Other", what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Sub-Fund has assigned the ICE BOFAML BB-B Global High Yield Index (hedged) as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by outperforming the benchmarks Weighted Average GHG Intensity

- How did the reference benchmark differ from a broad market index?
The benchmark is a broad market index.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The actual weighted average GHG Intensity portfolio was 87.11 % lower then weighted average GHG Intensity of the benchmark.

- How did this financial product perform compared with the reference benchmark?

01/10/2022 - 30/09/2023	Allianz Selective Global High Income	ICE BOFA BB-B GLOBAL HIGH YIELD INDEX INCLUDING TRANSACTION COSTS USD HEDGED IN USD	Active Return
Performance %	9.19	6.25	2.94

- How did this financial product perform compared with the broad market index?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

01/10/2022 - 30/09/2023	Allianz Selective Global High Income	ICE BOFA BB-B GLOBAL HIGH YIELD INDEX INCLUDING TRANSACTION COSTS USD HEDGED IN USD	Active Return
Performance %	9.19	6.25	2.94

Product name:

Allianz Short Duration Global Bond SRI

Legal entity identifier: 549300OYIOIK6HSXWK48

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 20.73% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Short Duration Global Bond SRI (the «Sub-Fund») promoted environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the investment process. This encompassed the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply and Sub-Fund specific exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio, in this respect, did not comprise on-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4) was 76.33 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments were applied:

- Sub-Fund assets may not be invested in Debt Securities of issuers which provide services in relation to tobacco of more than 10% of their revenues,
- Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of gambling and/or pornography and/or which are involved in the distribution/sales of gambling and/or pornography of more than 10% of their revenues and/or which provide services in relation to gambling and/or pornography of more than 10% of their revenues,
- Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of non-conventional oil and gas and/or which provide services in relation to non-conventional oil and gas of more than 10% of their revenues,
- Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of alcohol and/or which are involved in the distribution/sales of alcohol of more than 10% of their revenues and/or which provide services in relation to alcohol of more than 20% of their revenues-

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were, among other sustainability factors, applied to derive the SRI Rating.

The SRI Rating is used for the portfolio construction.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund’s assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund’s investments in various sectors and subsectors at

the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 2.4 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 13.34 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 6.6 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Product name:

Allianz Smart Energy

Legal entity identifier: 5299001HEJY28N2P7I26

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 72.94% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Smart Energy (the «Sub-Fund») invested in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives was 72.94 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),

- securities issued by companies that derive more than 10% of their revenues from weapons,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments were applied:

- Sub-Fund assets must not be invested in companies whose revenues exceed 30% origin from upstream oil or coal mining or power generation from these fuels.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria, are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were considered as part of the requirement to invest into Sustainable Investments. PAI indicators were used as part of the DNSH assessment. Investments in securities of issuers who did not pass the DNSH assessment were not counted as Sustainable Investments.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

Largest investment	Sector	% Assets	Country
NEXTERA ENERGY INC	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.94 %	USA
SSE PLC	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.82 %	United Kingdom
ENEL SPA	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.33 %	Italy
SCHNEIDER ELECTRIC SE	MANUFACTURING	3.31 %	USA
ANTOFAGASTA PLC	MINING AND QUARRYING	3.25 %	Chile
EDP RENOVAVEIS SA	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.16 %	Spain
ORSTED A/S	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.10 %	Denmark
NXP SEMICONDUCTORS NV	MANUFACTURING	2.84 %	People's Republic of China
VESTAS WIND SYSTEMS A/S	MANUFACTURING	2.79 %	Denmark
AIR LIQUIDE SA	MANUFACTURING	2.64 %	France
ALBEMARLE CORP	MANUFACTURING	2.60 %	USA
VERBUND AG	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	2.48 %	Austria
PANASONIC HOLDINGS CORP	MANUFACTURING	2.41 %	Japan
INFINEON TECHNOLOGIES AG	MANUFACTURING	2.39 %	Germany
RENESAS ELECTRONICS CORP	MANUFACTURING	2.39 %	Japan

What was the proportion of sustainability-related investments?

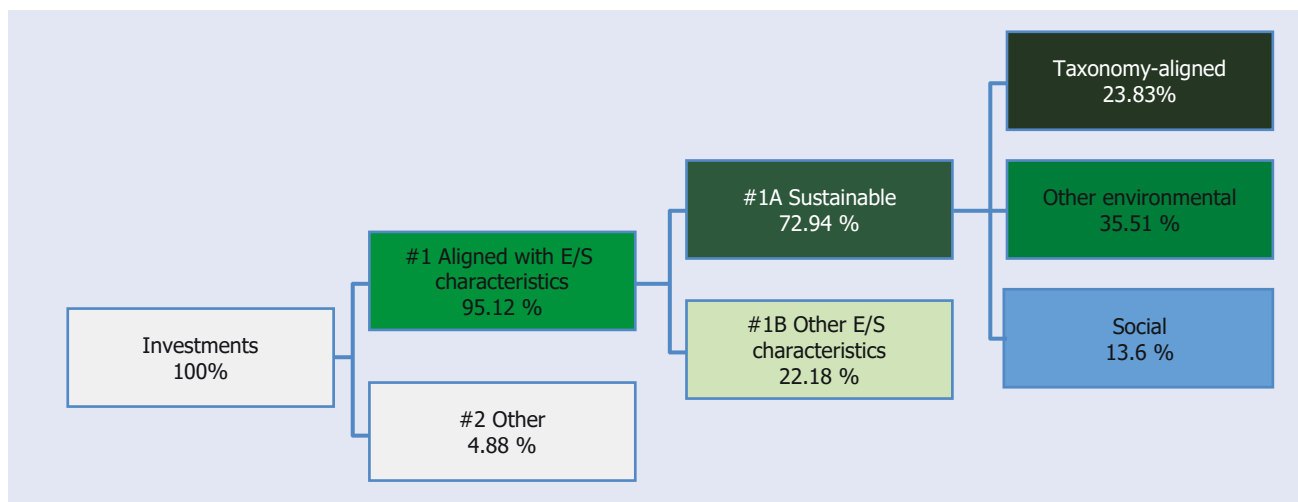

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	2.77 %
B07	Mining of metal ores	2.77 %
C	MANUFACTURING	66.43 %
C19	Manufacture of coke and refined petroleum products	2.44 %
C20	Manufacture of chemicals and chemical products	11.22 %
C23	Manufacture of other non-metallic mineral products	3.36 %
C24	Manufacture of basic metals	1.18 %
C25	Manufacture of fabricated metal products, except machinery and equipment	2.25 %
C26	Manufacture of computer, electronic and optical products	21.68 %
C27	Manufacture of electrical equipment	15.88 %
C28	Manufacture of machinery and equipment n.e.c.	4.84 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	1.87 %
C30	Manufacture of other transport equipment	1.71 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	25.92 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	25.92 %
K	FINANCIAL AND INSURANCE ACTIVITIES	0.13 %
K66	Activities auxiliary to financial services and insurance activities	0.13 %
Other	NOT SECTORIZED	4.75 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 35.51 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 13.6 %.

What investments were included under "#2 Other", what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or

investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Strategy4Life Europe 40 (the «Sub-Fund») promoted environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the investment process. This encompassed the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio, in this respect, did not comprise on-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4) was 96.13 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund’s assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation
describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund’s investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
K	FINANCIAL AND INSURANCE ACTIVITIES	0.65 %
K64	Financial service activities, except insurance and pension funding	0.65 %
O	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	96.13 %
O84	Public administration and defence; compulsory social security, from which:	96.13 %
O84.1	Administration of the State and the economic and social policy of the community	96.13 %
Other	NOT SECTORIZED	3.22 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 96.13 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

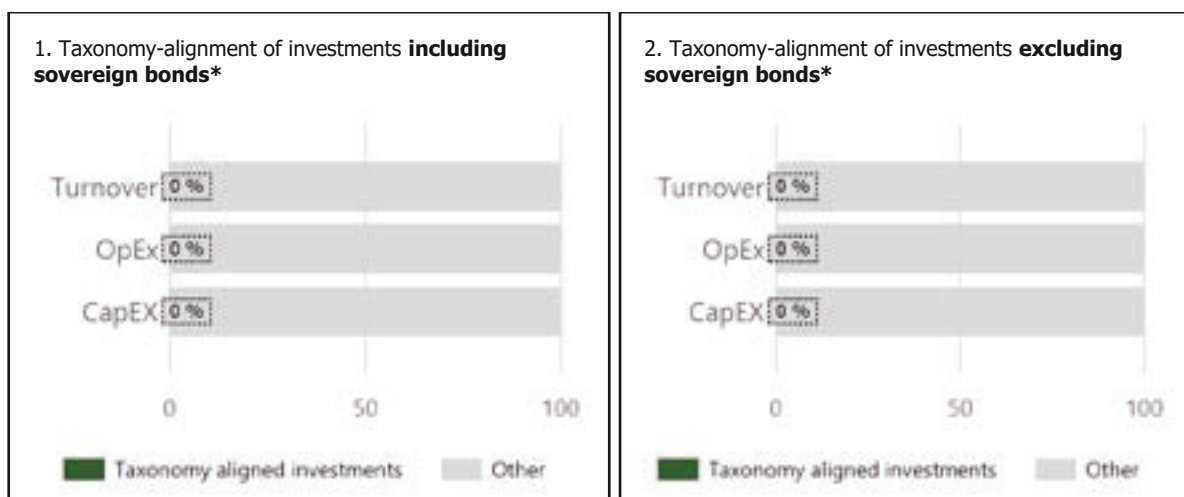

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 0 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 0 %.

What investments were included under "#2 Other", what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable
- How did this financial product perform compared with the reference benchmark?
Not applicable
- How did this financial product perform compared with the broad market index?
Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Sustainable Health Evolution

Legal entity identifier: 529900QNFA91WJ6M3Q96

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 90.45% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Sustainable Health Evolution (the «Sub-Fund») invested in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology. In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives was 90.45 %
- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were considered as part of the requirement to invest into Sustainable Investments. PAI indicators were used as part of the DNSH assessment. Investments in securities of issuers who did not pass the DNSH assessment were not counted as Sustainable Investments.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the

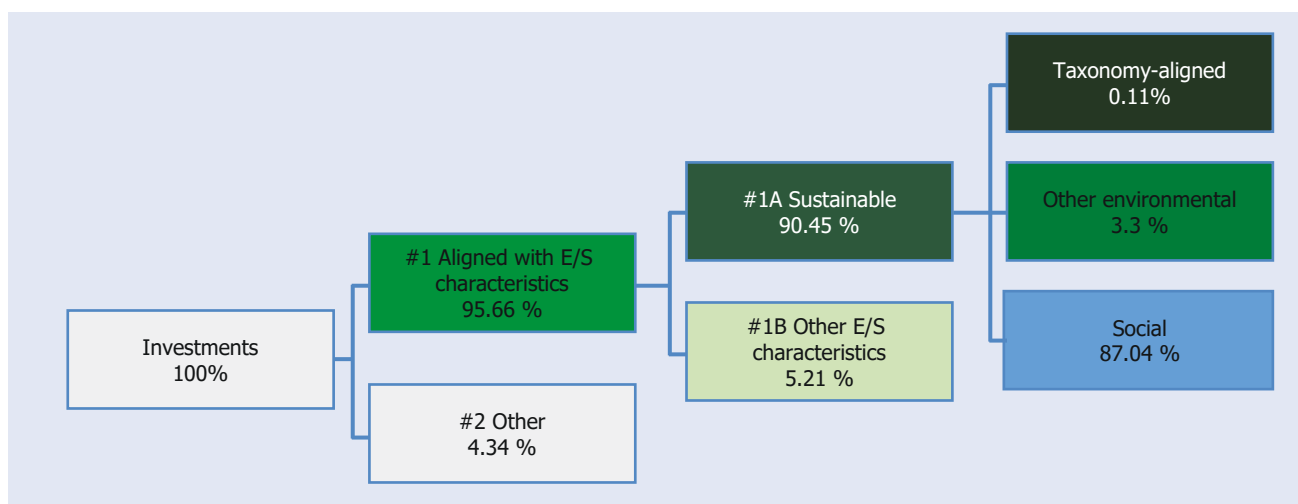

environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation
describes the share of
investments in specific
assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	67.01 %
C10	Manufacture of food products	1.26 %
C11	Manufacture of beverages	0.92 %
C20	Manufacture of chemicals and chemical products	2.71 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	29.35 %
C26	Manufacture of computer, electronic and optical products	18.16 %
C28	Manufacture of machinery and equipment n.e.c.	3.47 %
C32	Other manufacturing	11.15 %
F	CONSTRUCTION	1.00 %
F42	Civil engineering	1.00 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	6.55 %
G46	Wholesale trade, except of motor vehicles and motorcycles	6.55 %
K	FINANCIAL AND INSURANCE ACTIVITIES	4.59 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	4.59 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	4.10 %
M72	Scientific research and development	4.10 %
Q	HUMAN HEALTH AND SOCIAL WORK ACTIVITIES	12.41 %
Q86	Human health activities	12.41 %
Other	NOT SECTORIZED	4.34 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

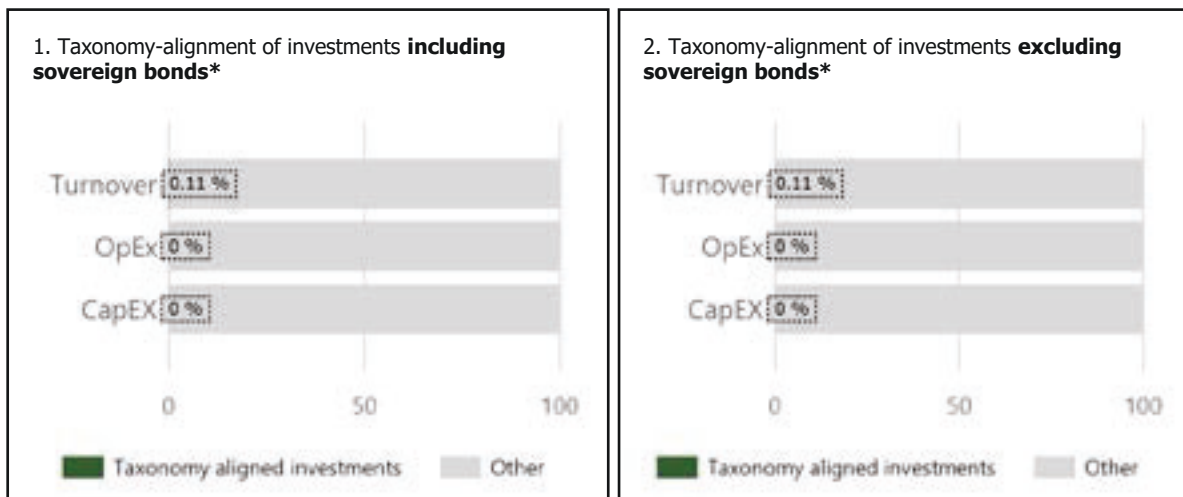

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

 No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 3.3 %.

 **What was the share of socially sustainable investments?**

The share of sustainable investments with a social objective was 87.04 %.

 **What investments were included under "#2 Other", what is their purpose and were there any minimum environmental or social safeguards?**

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable
- How did this financial product perform compared with the reference benchmark?
Not applicable
- How did this financial product perform compared with the broad market index?
Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Sustainable Multi Asset 75

Legal entity identifier: 529900A943LOFBAFNR54

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 34.66% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Sustainable Multi Asset 75 (the «Sub-Fund») promoted a broad range of environmental and/or social characteristics through investing at least 70 % of its assets following the «Multi Asset Sustainability Strategy» which includes, but is not limited to, various sustainability strategies and/or, invests in Green Bonds and/or Social Bonds, and/or Sustainability Bonds, and/or SFDR Article 8 & 9 Target Funds («SFDR Target Funds»). SFDR Target Funds are target funds whose objective it is to promote environmental or social characteristics or Sustainable Investments in accordance with Art. 8 or Art. 9 of the Sustainable Finance Disclosure Regulation.

The promoted environmental and/or social characteristics comprised depending on the sustainability strategy selected by the Investment Manager environmental, social, human rights, governance, business behaviour factors or investments in companies providing solutions that create positive environmental and social outcomes.

In addition, sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics sustainability indicators are used which performed as follows:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds, and/or Social Bonds, and/or Sustainability Bonds and/or in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy was 97.45 %.

- Where the Investment Manager decided to directly invest in Debt or Equity Securities as part

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

of the Multi Asset Sustainability Strategy, the investments adhered to the binding element of the sustainability strategy.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following sustainable minimum exclusion criteria for direct investments apply:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments were applied:

- Sub-fund assets may not be invested in securities of (corporate and sovereign) issuers of Lebanon, Saint Barthelemy and Ukraine,
- Sub-Fund assets may not be invested in securities issued by companies that are active in the palm oil industry and less than 50% of the respective company's revenue in palm oil is certified by RSPO (Roundtable on Sustainable Palm Oil),
- Sub-Fund assets may not be invested in securities issued by companies which are involved in the production of gambling and/or which are involved in the distribution/sales of gambling and/or which provide services in relation to gambling of more than 10% of their revenues,

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

business activities contribute positively to an environmental or a social objective. The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the

proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 10.94 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- **What was the share of investments made in transitional and enabling activities?**

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.02 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 26.18 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings,

controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable
- How did this financial product perform compared with the reference benchmark?
Not applicable
- How did this financial product perform compared with the broad market index?
Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Systematic Enhanced US Equity SRI

Legal entity identifier: 5299002WOGP7C2R2FD60

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 35.21% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Systematic Enhanced US Equity SRI (the «Sub-Fund») promoted environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the investment process. This encompassed the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of the Sub-Funds Portfolio (Portfolio, in this respect, did not comprise on-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 1 out of a scale from 0-4) was 99.02 %
- The actual percentage of the benchmark invested in best-in-class issuers was 92.76 %
- The Sub-Fund adhered to a 20 % reduction of investment universe
- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

Largest investment	Sector	% Assets	Country
APPLE INC	MANUFACTURING	7.69 %	USA

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

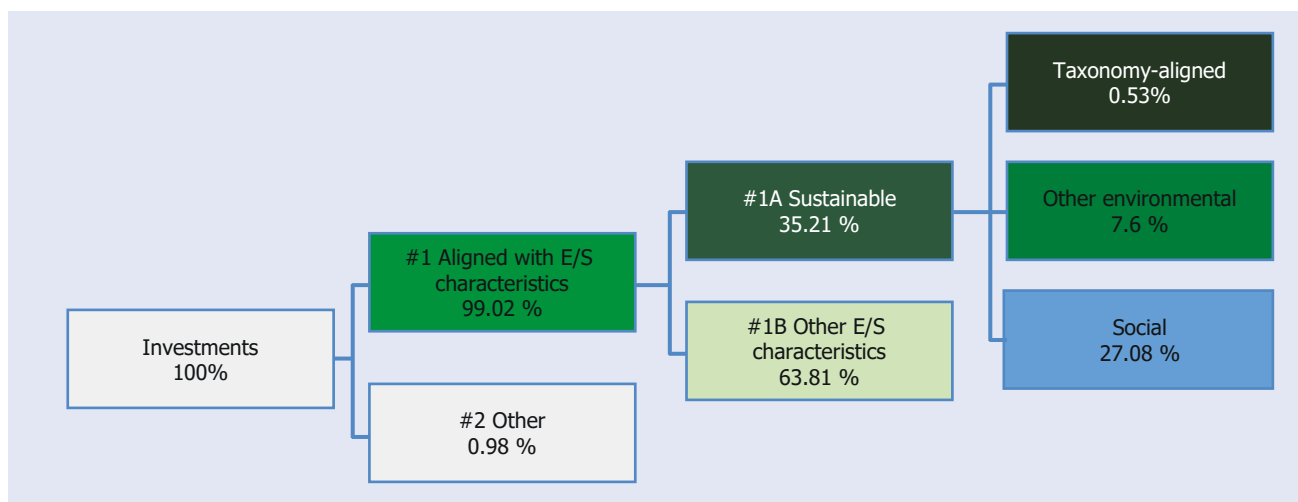

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation
describes the share of
investments in specific
assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.05 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

In fossil gas

In nuclear energy

 No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- [What was the share of investments made in transitional and enabling activities?](#)

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.6 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 27.08 %.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Sub-Fund has assigned MSCI USA ESG Screened Index as benchmark.

- **How did the reference benchmark differ from a broad market index?**
The benchmark uses ESG exclusion criteria for index construction.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
 - The actual percentage of the Sub-Fund's Portfolio (Portfolio, in this respect, did not comprise on-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 1 out of a scale from 0-4) was 99.02 %
 - The actual percentage of the benchmark invested in best-in-class issuers was {bmSustIndSriBic} %

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the reference benchmark?

Product name:

Allianz Target Maturity Euro Bond I

Legal entity identifier: 529900AGQHNHIYLXHR90

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 28.46% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Target Maturity Euro Bond I (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") and promoted environmental characteristics by addressing greenhouse gas (GHG) Intensity. The "Sustainability KPI" measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company`s annual sales ("GHG Intensity"). GHG Intensity was addressed by outperforming the Weighted Average GHG Intensity of the Sub-Fund against its benchmark.

In addition, sustainable minimum exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 93.98 %
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark was 71.94 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considers GHG related PAI indicators by outperforming the Weighted Average GHG Intensity against its benchmark.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 17/05/2023-30/09/2023

--	-------------------------------	--------	-------

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 11.69 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 15.68 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific

markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Sub-Fund has assigned the ICE BofA Euro Corporate Index as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by outperforming the benchmarks Weighted Average GHG Intensity

Reference benchmarks

are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?

The benchmark is a broad market index.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The actual weighted average GHG Intensity portfolio was 71.94 % lower than weighted average GHG Intensity of the benchmark.

- How did this financial product perform compared with the reference benchmark?

Benchmark is only used in connection with the measurement of Sub-Fund's GHG intensity.

- How did this financial product perform compared with the broad market index?

Benchmark is only used in connection with the measurement of Sub-Fund's GHG intensity.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 6.39% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Target Maturity Euro Bond II (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") and promoted environmental characteristics by addressing greenhouse gas (GHG) Intensity. The "Sustainability KPI" measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company`s annual sales ("GHG Intensity"). GHG Intensity was addressed by outperforming the Weighted Average GHG Intensity of the Sub-Fund against its benchmark.

In addition, sustainable minimum exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 47.22 %

- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark was 65.11 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy. The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective. The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considers GHG related PAI indicators by outperforming the Weighted Average GHG Intensity against its benchmark.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 04/09/2023-30/09/2023

Largest investment	Sector	% Assets	Country
ALLIANZ ENHNCD S/T EUR-XTEUR	N/A	47.22 %	Luxembourg
DUTCH TREASURY CERT ZERO 30.10.2023	Administration of the State and the economic and social policy of the community (O84.1)	10.01 %	Netherlands

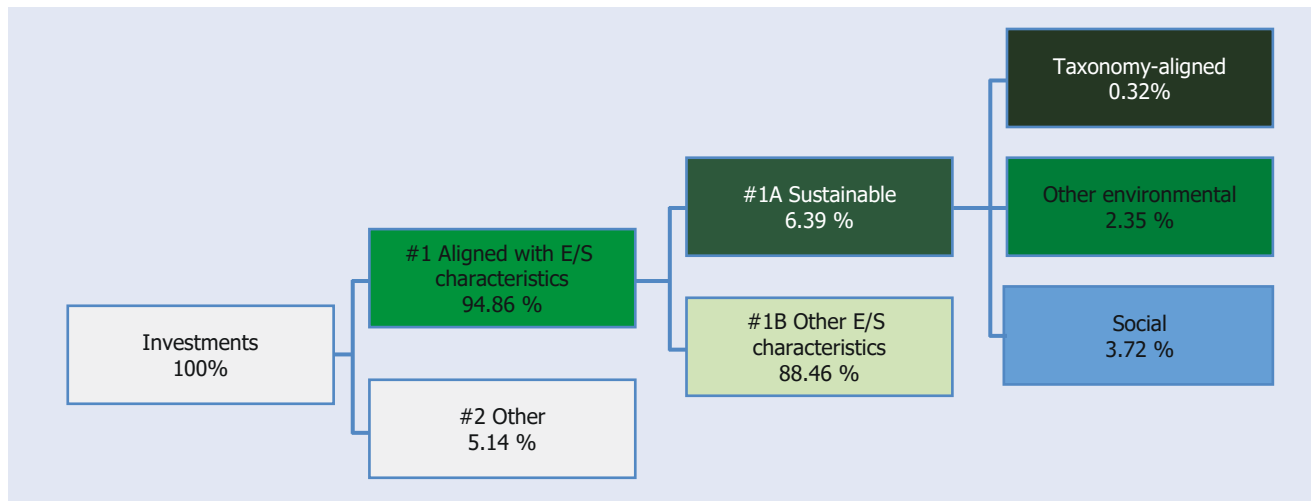

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- [What was the asset allocation?](#)

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	5.70 %
C11	Manufacture of beverages	0.33 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

government bonds.

The share of investments in sovereigns was 65.25 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
 - In fossil gas
 - In nuclear energy
- No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 2.35 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 3.72 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Sub-Fund has assigned the ICE BofA Euro Corporate Index as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by outperforming the benchmarks Weighted Average GHG Intensity

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?
The benchmark is a broad market index.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
The actual weighted average GHG Intensity portfolio was 65.11 % lower than weighted average GHG Intensity of the benchmark.
- How did this financial product perform compared with the reference benchmark?
Benchmark is only used in connection with the measurement of Sub-Fund's GHG intensity.
- How did this financial product perform compared with the broad market index?
Benchmark is only used in connection with the measurement of Sub-Fund's GHG intensity.

Product name:

Allianz Thematica

Legal entity identifier: 5493004ZRV2CSS15YF05

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 47.56% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Thematica (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) («KPI Strategy (Absolute Threshold)») which targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

Furthermore, the Sub-Fund limited its allocation into issuers which significantly harm environmental and/or social objectives.

Until the 28.09.2023 the Sub-Fund promoted environmental characteristics through integrating the transition to a low carbon economy of the top 10 carbon emitting issuers as part of the Climate Engagement with Outcome Strategy (CEWO-Strategy).

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

Sustainability-indicators of the CEWO-Strategy as of 28.09.2023:

- The response rate (companies replied to the engagement questionnaire) of engagement with the top 21 emitters was 100% (the top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 21 emitters were identified)
- The change of the carbon footprint of the top 21 (for which the relevant information is available both for the base and reference years) emitters compared to the base year was -12,7% (CO2 emissions of the year 2019 compared to 2021).

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- In case of investments in sovereign issuers, all sovereigns were evaluated by an SRI Rating. Sustainability-indicators of the KPI Strategy as of 30.09.2023:
- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 95.65 %.
- The actual weighted average sustainable investment share of Sub-Fund Assets was 47.56 %.
- The actual share of investments not satisfying the Do No Significant Harm («DNSH») assessment of Sub-Fund Assets was 6.01 %.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy. The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective. The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considered PAI indicators by limiting its allocation into issuers

which significantly harm environmental and/or social objectives.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund’s assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund’s investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	6.84 %
B05	Mining of coal and lignite	0.49 %
B06	Extraction of crude petroleum and natural gas	1.36 %
B07	Mining of metal ores	2.38 %
B08	Other mining and quarrying	1.03 %
B09	Mining support service activities	1.57 %
C	MANUFACTURING	51.84 %
C10	Manufacture of food products	0.99 %
C11	Manufacture of beverages	0.66 %
C14	Manufacture of wearing apparel	0.00 %
C15	Manufacture of leather and related products	0.00 %
C19	Manufacture of coke and refined petroleum products	1.21 %
C20	Manufacture of chemicals and chemical products	2.81 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	6.16 %

Other	NOT SECTORIZED	3.37 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.81 %.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 26.35 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable
- How did this financial product perform compared with the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable

- How did this financial product perform compared with the broad market index?

Not applicable

Product name:

Allianz Total Return Asian Equity

Legal entity identifier: 549300K61J05QBE7CP78

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 37.27% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Total Return Asian Equity (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") and promoted environmental characteristics by addressing greenhouse gas (GHG) Intensity. The "Sustainability KPI" measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company`s annual sales ("GHG Intensity"). GHG Intensity was addressed by outperforming the Weighted Average GHG Intensity of the Sub-Fund against its benchmark.

In addition, sustainable minimum exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 89.3 %
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark was 61.12 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considers GHG related PAI indicators by outperforming the Weighted Average GHG Intensity against its benchmark.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

Largest investment	Sector	% Assets	Country
HDFC BANK LTD-ADR	FINANCIAL AND INSURANCE ACTIVITIES	9.04 %	India
TAIWAN SEMICONDUCTOR MANUFAC	MANUFACTURING	8.60 %	Taiwan
SAMSUNG ELECTRONICS CO LTD	MANUFACTURING	8.58 %	South Korea
TENCENT HOLDINGS LTD	INFORMATION AND COMMUNICATION	6.63 %	People's Republic of China
ALIBABA GROUP HOLDING-SP ADR	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	5.13 %	People's Republic of China
RELIANCE INDUSTRIES LTD	MANUFACTURING	4.23 %	India
KWEICHOW MOUTAI CO LTD-A	MANUFACTURING	4.18 %	People's Republic of China

MEITUAN-CLASS B	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	2.92 %	People's Republic of China

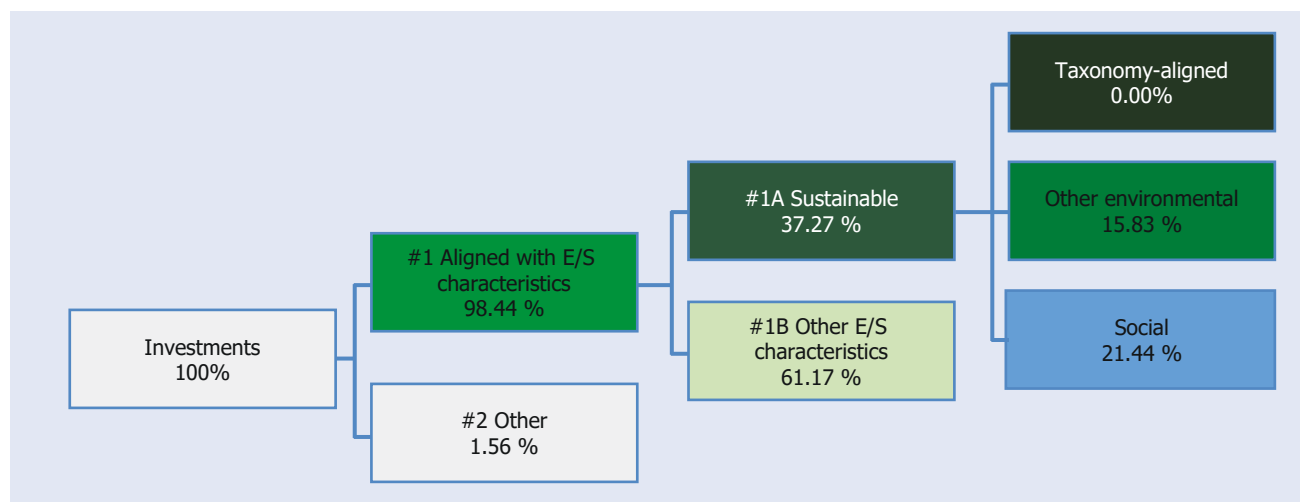

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation
describes the share of
investments in specific
assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 15.83 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 21.44 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Sub-Fund has assigned the MSCI AC Asia Excl. Japan Total Return Net as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by outperforming the benchmarks Weighted Average GHG Intensity

Reference benchmarks

are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?

The benchmark is a broad market index.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The actual weighted average GHG Intensity portfolio was 61.12 % lower than weighted average GHG Intensity of the benchmark.

- How did this financial product perform compared with the reference benchmark?

01/10/2022 - 30/09/2023	Allianz Total Return Asian Equity	MSCI AC ASIA EX JAPAN TOTAL RETURN (NET) IN USD	Active Return
Performance %	8.3	10.88	-2.58

- How did this financial product perform compared with the broad market index?

01/10/2022 - 30/09/2023	Allianz Total Return Asian Equity	MSCI AC ASIA EX JAPAN TOTAL RETURN (NET) IN USD	Active Return
Performance %	8.3	10.88	-2.58

Product name:

Allianz Treasury Short Term Plus Euro

Legal entity identifier: 549300RZL4PEFWYY4H53

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 23.52% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Treasury Short Term Plus Euro (the «Sub-Fund») promoted environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the investment process. This encompassed the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio, in this respect, did not comprise on-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 1 out of a scale from 0-4) was 98.69 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	0.53 %
B08	Other mining and quarrying	0.53 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 14.72 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- **What was the share of investments made in transitional and enabling activities?**

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.49 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 11.84 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings,

controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable
- How did this financial product perform compared with the reference benchmark?

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz US Short Duration High Income Bond (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Absolute) («KPI Strategy (Absolute)») and promoted environmental characteristics by addressing greenhouse gas (GHG) intensity. The «Sustainability KPI» measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on a company`s annual sales («GHG Intensity»). GHG Intensity was addressed by ensuring a year-on-year improvement pathway of the weighted average GHG Intensity on portfolio level for the prospective fiscal year ends of the Sub-Fund. Until the 29.05.2023 the Sub-Fund promoted environmental characteristics through integrating the transition to a low carbon economy of the top 10 carbon emitting issuers as part of the Climate Engagement with Outcome Strategy (CEWO-Strategy).

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

Sustainability-indicators of the CEWO-Strategy as of 29.05.2023:

- The response rate (companies replied to the engagement questionnaire) of engagement with the top 19 emitters was 79% (the top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022, Q1/2023 the 19 emitters were identified)
- The change of the carbon footprint of the top 17 (for which the relevant information is available both for the base and reference years) emitters compared to the base year was -13,4% (CO2 emissions of the year 2019 compared to 2021).
- In case of investments in sovereign issuers, all sovereigns were evaluated by an SRI Rating.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability-indicators of the KPI Strategy as of 30.09.2023:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 70.68 %
- The year-on-year improvement pathway of the Sub-Fund's Weighted Average GHG Intensity was 9.54 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considered GHG related PAI indicators by ensuring a Weighted Average GHG Intensity improvement pathway. The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund’s assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation
describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund’s investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation,

storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	1.35 %
B07	Mining of metal ores	1.35 %
C	MANUFACTURING	17.19 %
C19	Manufacture of coke and refined petroleum products	8.18 %
C20	Manufacture of chemicals and chemical products	2.83 %

R93	Sports activities and amusement and recreation activities	1.48 %
Other	NOT SECTORIZED	5.89 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 2.54 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 3.12 %.

What investments were included under "#2 Other", what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Better World Defensive

Legal entity identifier: 529900ASTWITUJ82W129

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 55.39%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: 37.18%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

Allianz Better World Defensive (the «Sub-Fund») invested in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology. In addition, sustainable minimum exclusion criteria were applied. No reference benchmark had been designated for the purpose of meeting the sustainable investment objective.

- **How did the sustainability indicators perform?**

To measure the attainment of the Sub-Fund's sustainable investment objective the following sustainability indicators are used and performed as follows:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives was 92.56 %

The Sustainable Investment share is based on the following methodology: Sustainable investments contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective. To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/ or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were considered as part of the requirement to invest into Sustainable Investments. PAI indicators were used as part of the DNSH assessment. Investments in securities of issuers who did not pass the DNSH assessment were not counted as Sustainable Investments.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not contribute to meet the sustainable investment objective. Examples of such assets are derivatives, cash and deposits. As these assets were not used to meet the sustainable investment objective of the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the attainment of the sustainable investment objective within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the sustainable investment objective of the Sub-Fund. A low portion of the Sub-Fund contained assets which did not contribute to the attainment of the sustainable investment objective. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	0.63 %
B07	Mining of metal ores	0.63 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0.07 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 48.49 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 37.18 %.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Under «#2 Not sustainable» parts of investments were included related to business activities which were not counted as Sustainable Investments, such as cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to attain the sustainability investment objective during the reference period?

To ensure that the Sub-Fund meets its sustainable investment objective, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with environmental objective of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated for the purpose of meeting the sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains sustainable objective.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?

Product name:

Allianz Better World Dynamic

Legal entity identifier: 529900APHN2CJCOLZ557

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 39.08%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: 46.39%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

Allianz Better World Dynamic (the «Sub-Fund») invested in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of meeting the sustainable investment objective.

- **How did the sustainability indicators perform?**

To measure the attainment of the Sub-Fund's sustainable investment objective the following sustainability indicators are used and performed as follows:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives was 85.47 %

The Sustainable Investment share is based on the following methodology: Sustainable investments contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective. To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/ or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were considered as part of the requirement to invest into Sustainable Investments. PAI indicators were used as part of the DNSH assessment. Investments in securities of issuers who did not pass the DNSH assessment were not counted as Sustainable Investments.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not contribute to meet the sustainable investment objective. Examples of such assets are derivatives, cash and deposits. As these assets were not used to meet the sustainable investment objective of the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

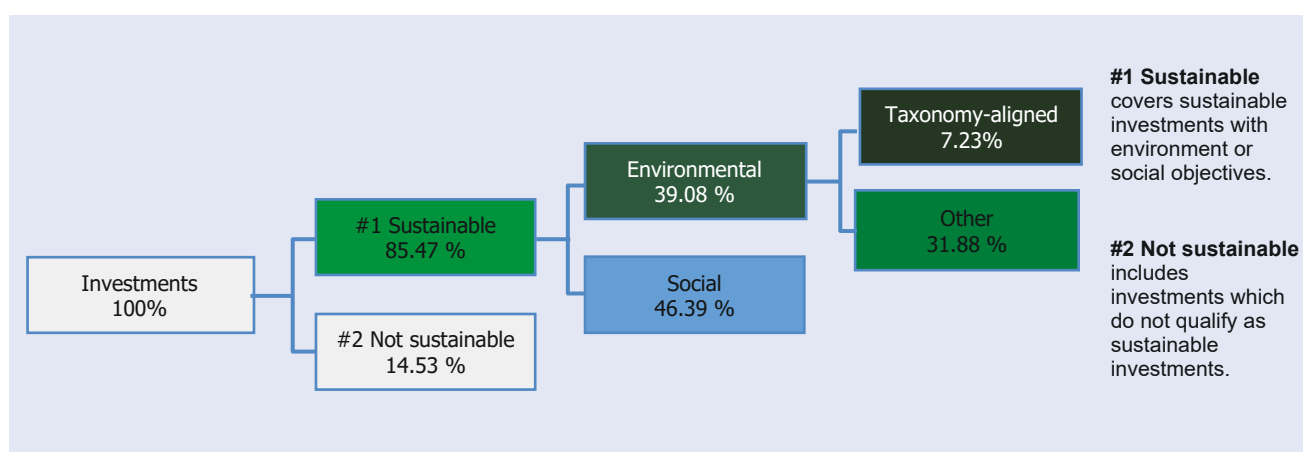

Sustainability-related investments refer to all investments that contribute to the attainment of the sustainable investment objective within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the sustainable investment objective of the Sub-Fund. A low portion

of the Sub-Fund contained assets which did not contribute to the attainment of the sustainable investment objective. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

government bonds.

The share of investments in sovereigns was 0.03 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

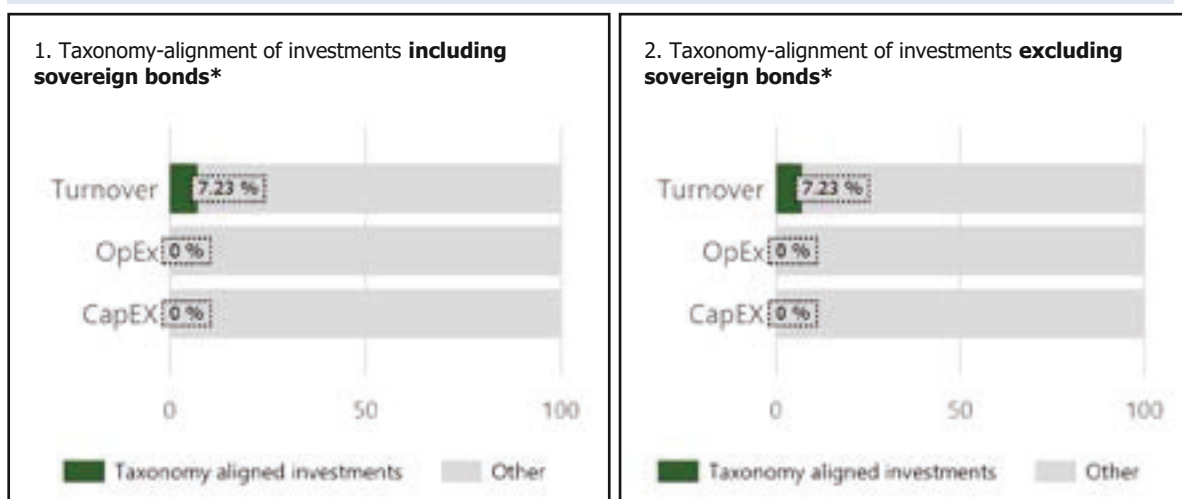

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 31.88 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 46.39 %.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Under «#2 Not sustainable» parts of investments were included related to business activities which were not counted as Sustainable Investments, such as cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to attain the sustainability investment objective during the reference period?

To ensure that the Sub-Fund meets its sustainable investment objective, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with environmental objective of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference sustainable benchmark?

Product name:

Allianz Better World Moderate

Legal entity identifier: 529900R8CZVBS2IWI189

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 47.96%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: 40.55%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

Allianz Better World Moderate (the «Sub-Fund») invested in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of meeting the sustainable investment objective.

- **How did the sustainability indicators perform?**

To measure the attainment of the Sub-Fund's sustainable investment objective the following sustainability indicators are used and performed as follows:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives was 88.51 %

The Sustainable Investment share is based on the following methodology: Sustainable investments contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective. To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/ or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- [How did the sustainable investments not cause significant harm to any sustainable investment objective?](#)

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were considered as part of the requirement to invest into Sustainable Investments. PAI indicators were used as part of the DNSH assessment. Investments in securities of issuers who did not pass the DNSH assessment were not counted as Sustainable Investments.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not contribute to meet the sustainable investment objective. Examples of such assets are derivatives, cash and deposits. As these assets were not used to meet the sustainable investment objective of the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

Largest investment	Sector	% Assets	Country
AIA GROUP LTD	FINANCIAL AND INSURANCE ACTIVITIES	1.47 %	Hong Kong

What was the proportion of sustainability-related investments?

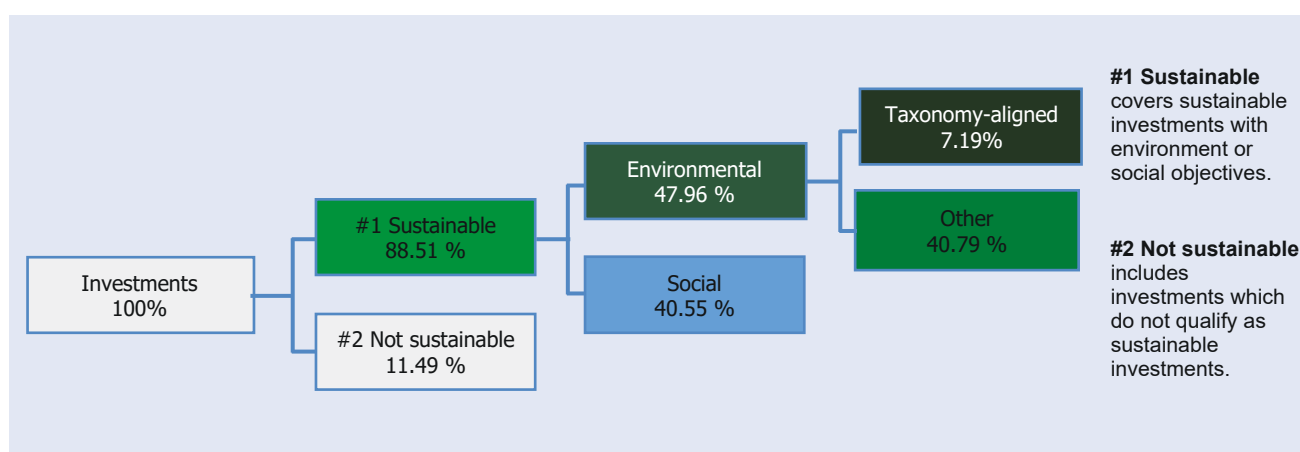

Sustainability-related investments refer to all investments that contribute to the attainment of the sustainable investment objective within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the sustainable investment objective of the Sub-Fund. A low portion

of the Sub-Fund contained assets which did not contribute to the attainment of the sustainable investment objective. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

Product name:

Allianz Green Bond

Legal entity identifier: 549300JPE1XADGY8YM71

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 91.84%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: 0.23%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

Allianz Green Bond (the «Sub-Fund») followed the «Green Bond Strategy». The Green Bond Strategy's objective is to mobilize capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change. Green Bonds are designated Debt Securities intended to encourage sustainability and to support climate-related or other types of special environmental projects. The Sub-Fund invested primarily in Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects, notably in the following fields: energy efficiency, renewable energy, raw materials, water and land, waste management, greenhouse gas emissions reduction, biodiversity preservation or circular economy. The Sub-Fund invested at least 80 % of its assets in Sustainable Investments.

In addition, Sub-Fund specific exclusion criteria were applied.

A reference benchmark had been designated for the purpose of for the purpose of meeting the sustainable investment objective.

- **How did the sustainability indicators perform?**

To measure the attainment of the Sub-Fund's sustainable investment objective the following sustainability indicators are used and performed as follows:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds was 92.14 %
- Actual sustainable investment share was 92.07 %
- The Sub-Fund adhered to a minimum SRI Rating of 1 for Green Bonds held in the portfolio (out of a scale from 0-4; 0 being the worst rating and 4 the best rating).

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following exclusion criteria for direct investments were applied:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons), and securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies involved in the production of tobacco, and securities of companies involved in the distribution of tobacco with more than 5% of their revenues,
- securities issued by companies that derive more than 30 % of their revenue from thermal coal extraction and securities issued by utility companies that generate more than 30% of their revenues from coal.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators

through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were considered as part of the requirement to invest into Sustainable Investments. PAI indicators were used as part of the DNSH assessment. Investments in securities of issuers who did not pass the DNSH assessment were not counted as Sustainable Investments. The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not contribute to meet the sustainable investment objective. Examples of such assets are derivatives, cash and deposits. As these assets were not used to meet the sustainable investment objective of the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

Largest investment	Sector	% Assets	Country

---	------------------------	--------	-------

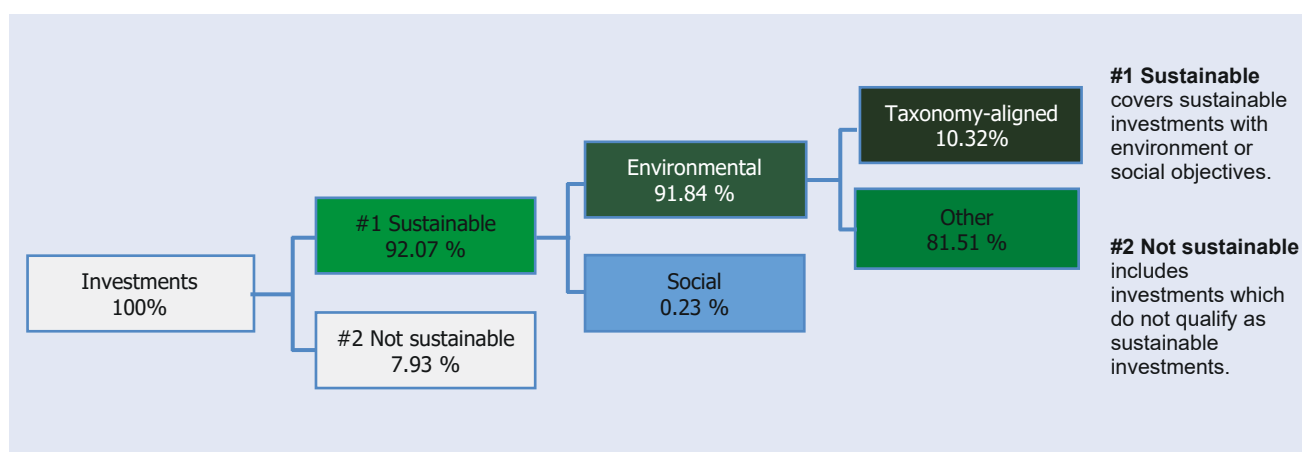

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the attainment of the sustainable investment objective within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the sustainable investment objective of the Sub-Fund. A low portion of the Sub-Fund contained assets which did not contribute to the attainment of the sustainable investment objective. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 20.95 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

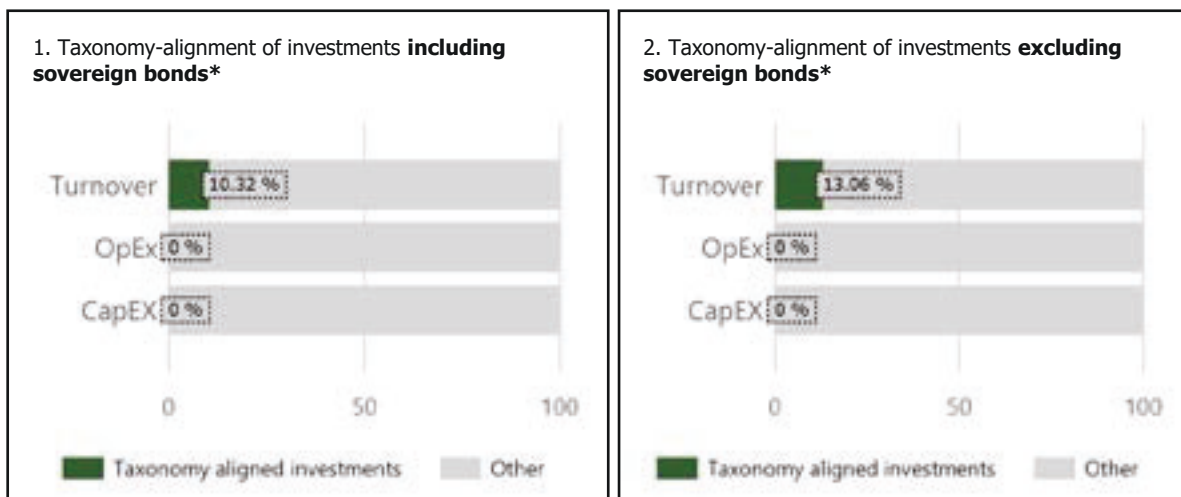

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 81.51 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 0.23 %.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Under «#2 Not sustainable» parts of investments were included related to business activities which were not counted as Sustainable Investments, such as cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to attain the sustainability investment objective during the reference period?

To ensure that the Sub-Fund meets its sustainable investment objective, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with environmental objective of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio

investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference sustainable benchmark?

Yes, the Sub-Fund has assigned the ICE BOFAML GREEN BOND INDEX as a Benchmark.

- How did the reference benchmark differ from a broad market index?

The benchmark tracks the performance of securities issued for qualified green purposes.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?

The Sub-Fund's sustainability performance is not measured against the benchmark. The Sub-Fund hasn't defined any sustainability indicators in order to compare the alignment of the benchmark with the environmental and social characteristics of the Sub-Fund.

- How did this financial product perform compared with the reference benchmark?

01/10/2022 - 30/09/2023	Allianz Green Bond	ICE BOFA GREEN BOND EUR (GREN) INCLUDING TRANSACTION COSTS HEDGED IN EUR	Active Return
Performance %	0.6	0.3	0.3

Reference benchmarks are indexes to measure whether the financial product attains sustainable objective.

Product name:

Allianz SDG Euro Credit

Legal entity identifier: 529900IA5IQGQKTAYO36

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 62.45%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: 26.35%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

Allianz SDG Euro Credit (the «Sub-Fund») invested in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of meeting the sustainable investment objective.

- **How did the sustainability indicators perform?**

To measure the attainment of the Sub-Fund's sustainable investment objective the following sustainability indicators are used and performed as follows:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives was 88.8 %

The Sustainable Investment share is based on the following methodology: Sustainable investments contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective. To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/ or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles,

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

Moreover, Sub-Fund specific exclusion criteria for direct investments were applied:

- securities issued by companies involved in Arctic Oil Drilling and other unconventional O&G production,
- securities issued by companies involved in Gambling,
- securities issued by companies that derive more than 10% of their revenues from high-proof Alcohol,
- securities issued by companies that derive more than 15% from sales to the Tobacco industry.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were considered as part of the requirement to invest into Sustainable Investments. PAI indicators were used as part of the DNSH assessment. Investments in securities of issuers who did not pass the DNSH assessment were not counted as Sustainable Investments. The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not contribute to meet the sustainable investment objective. Examples of such assets are derivatives, cash and deposits. As these assets were not used to meet the sustainable investment objective of the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the attainment of the sustainable investment objective within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the sustainable investment objective of the Sub-Fund. A low portion of the Sub-Fund contained assets which did not contribute to the attainment of the sustainable investment objective. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	16.48 %
C10	Manufacture of food products	1.73 %
C14	Manufacture of wearing apparel	0.88 %
C17	Manufacture of paper and paper products	1.11 %
C20	Manufacture of chemicals and chemical products	1.15 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.96 %
C23	Manufacture of other non-metallic mineral products	0.37 %
C26	Manufacture of computer, electronic and optical products	1.50 %
C27	Manufacture of electrical equipment	1.56 %
C28	Manufacture of machinery and equipment n.e.c.	1.59 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	1.11 %
C30	Manufacture of other transport equipment	0.55 %
C32	Other manufacturing	1.99 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	15.38 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	15.38 %
E	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	0.15 %
E36	Water collection, treatment and supply	0.15 %

O84.1	Administration of the State and the economic and social policy of the community	1.24 %
O84.2	Provision of services to the community as a whole	0.63 %
Other	NOT SECTORIZED	6.12 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 1.87 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- **What was the share of investments made in transitional and enabling activities?**

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 55.68 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 26.35 %.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Under «#2 Not sustainable» parts of investments were included related to business activities which were not counted as Sustainable Investments, such as cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to attain the sustainability investment objective during the reference period?

To ensure that the Sub-Fund meets its sustainable investment objective, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with environmental objective of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated for the purpose of meeting the sustainable investment objective.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?
Not applicable
- How did this financial product perform compared with the reference benchmark?
Not applicable
- How did this financial product perform compared with the broad market index?
Not applicable

Reference benchmarks
are indexes to measure whether the financial product attains sustainable objective.

Note for investors in the Federal Republic of Germany (Unaudited)

All payments to shareholders (redemption proceeds, any dividends and other payments) can be made through the German Paying Agent listed in the "Directory". Applications for redemption and conversion may be submitted through the German Paying Agent.

With respect to sales in the Federal Republic of Germany, the Subscription, the Redemption and, if applicable, Conversion prices are published on the website <https://de.allianzgi.com>. Any announcements to investors are published on the website <https://de.allianzgi.com>. For selected share classes (e.g. share classes exclusively for institutional investors or share classes whose bases of taxation are not published in the Federal Republic of Germany) publication can be performed on one of the websites <https://regulatory.allianzgi.com> or <https://lu.allianzgi.com>.

In addition, in accordance with § 298 paragraph 2 of the German Capital Investment Code a durable medium within the meaning of § 167 of the German Capital Investment Code is used to inform investors in the Federal Republic of Germany in the following cases:

- Suspension of the redemption of Shares in a Subfund,
- Termination of the management of the Company/a Subfund or liquidation of the Company/a Subfund,
- Amendments to the terms and conditions that are not reconcilable with previous investment principles, affect material investor rights, or concern fees or expense reimbursements payable from a Subfund, including background information on the amendments and the rights of investors,
- In the case of a merger of a Subfund with another fund, the merger information in accordance with Article 43 of Directive 2009/65/EC, In the case of conversion of a Subfund into a feeder fund or, if applicable, changes to a master fund, the information to be prepared in accordance with Article 64 of Directive 2009/65/EC.

The prospectus, key investor information, Articles of Incorporation, current annual and semi-annual reports, subscription, redemption and, if applicable, conversion prices, and the additional documentation listed under "Available Documentation" may be obtained in hard copy without charge from the Information Agent listed in the "Directory" and on the website <https://de.allianzgi.com>. For selected Share Classes (e.g. Share Classes intended exclusively for institutional investors or Share Classes for which no bases of taxation are published in the Federal Republic of Germany), the information may be published on one of the following websites: <https://regulatory.allianzgi.com> or <https://lu.allianzgi.com>. The depositary agreement is available for inspection without charge at the offices of the Information Agent.

Neither the Management Company, the Depositary, the Registrar and Transfer Agent, the Distributor nor the Paying and Information Agents are liable for errors or omissions in the published prices.

the Republic of Austria has been registered with the Finanzmarktaufsicht (Vienna) pursuant to section 140 InvFG.

It is recommended to the investors to check before the acquisition of shares of the Sub-Funds if for the respective share class the required fiscal data are published via Oesterreichische Kontrollbank AG.

Note for Investors in the United Kingdom (Unaudited)

In relation to all Funds, the Unit Trust has received the necessary authorisations that the Shares may be offered for sale in the United Kingdom.

UK Distributor and Facilities Agent

The name and address of the UK Distributor and Facilities Agent is listed in the Directory.

All payments to Unitholders (proceeds of redemption, any distributions and other payments) can be made through the UK Distributor and Facilities Agent.

In addition to the procedures set out in the "Administration of the Trust" section of the Prospectus, any person wishing to purchase Units or any Unitholders wishing to have all or any of their Units redeemed or converted may also apply in writing to the UK Distributor and Facilities Agent and should include the duly completed application or redemption or conversion request form as appropriate or such other written notification specified by the UK Distributor and Facilities Agent.

Furthermore, the Subscription and Redemption Prices can be obtained from the UK Distributor and Facilities Agent and shall be published on a website address specified in the Prospectus. Any person who has a complaint to make about the operation of the scheme can submit the complaint to the UK Distributor and Facilities Agent.

Any complaints may be sent to The Complaints Officer at the address of the UK Distributor and Facilities Agent. A copy of the complaints process leaflet of the UK Distributor and Facilities Agent is available on request. Eligible complainants may also refer their complaint to the Financial Ombudsman Service if they are not satisfied with the final response from the UK Distributor and Facilities Agent.

UK Reporting Status Units

The Unit Trust currently intends to apply in respect of each accounting period for certification of certain Classes of Units in the Funds as reporting Classes of Units for UK tax purposes ("UK Reporting Status"). However, no guarantee can be given that such certification will be obtained.

The UK Retail Distribution Review (RDR)

Intermediaries that are regulated by the UK's Financial Conduct Authority (FCA) or are a UK branch of a regulated entity in a member state of the EEA are from 31 December 2012 subject to the FCA's RDR rules in relation to investment advice that they provide to retail clients.

In accordance with the RDR rules, any intermediary distributing funds who (i) is subject to these rules and (ii) who provides personal recommendations or advice to retail clients located in the UK, shall not be entitled to receive any commission from the fund provider in respect of any investment made after 31 December 2012 on behalf of, or related services provided to, such retail clients.

Any potential investor who is subject to the RDR rules and who provides personal recommendations or advice to retail clients located in the UK is therefore obliged to ensure that it only invests in appropriate unit classes on behalf of its clients.

The above summary does not purport to be a comprehensive description of all the considerations that may be relevant to an investor with regard to RDR. Potential investors are strongly recommended to contact their own legal advisers in this respect.

Available Documentation

The Prospectus, the Key Investor Information Document, the Trust Deed, the annual and semi-annual reports as well as the material contracts referred to in this Prospectus, together with the UCITS Regulations and the Central Bank Regulations, can be inspected, free of charge, at or obtained from the UK Distributor and Facilities Agent.

Note for investors in Switzerland (Unaudited)

1. Representative and Paying Agent in Switzerland

BNP Paribas, Paris, Zurich Branch, Selnaustrasse 16, CH-8002 Zurich, is Representative and Paying Agent in Switzerland for the shares distributed in Switzerland.

2. Place where the Relevant Documents may be obtained

The Prospectus, the Articles of Incorporation, the Key Investor Information as well as the Annual and Semi-Annual reports as well as the details of the changes in portfolio composition during the period under review may be obtained without charge from the Representative in Switzerland.

3. Publications

Publications in Switzerland are made on www.fundinfo.com. In Switzerland, Subscription and Redemption Prices together and/or the Net Asset Value (with the indication "commissions excluded") of the Shares are published daily on www.fundinfo.com.

4. Payment of retrocessions and rebates

Retrocessions:

The Management Company and its agents may pay retrocessions as remuneration for distribution activity in respect of shares in or from Switzerland. This remuneration may be deemed payment for the following services in particular:

- setting up processes for subscribing, holding and safe custody of the shares;
- keeping a supply of marketing and legal documents, and issuing the said documents;
- forwarding or providing access to legally required publications and other publications;
- performing due diligence delegated by the Management Company in areas such as money laundering, ascertaining client needs and distribution restrictions;
- mandating an authorised auditor to check compliance with certain duties of the Distributor, in particular with the Guidelines on the Distribution of Collective Investment

Schemes issued by the Asset Management Association Switzerland (AMAS);

- operating and maintaining an electronic distribution and/or information platform;
- clarifying and answering specific questions from investors pertaining to the investment product or the Management Company or the Sub-Investment Manager;
- drawing up fund research material;
- central relationship management;
- subscribing for shares as a "nominee" for several clients as mandated by the Management Company;
- training client advisors in collective investment schemes;
- mandating and monitoring additional distributors.

Retrocessions are not deemed to be rebates even if they are ultimately passed on, in full or in part, to the investors.

The recipients of the retrocessions must ensure transparent disclosure and inform the investor, unsolicited and free of charge, about the amount of remuneration they may receive for distribution.

On request, the recipients of retrocessions must disclose the amounts they actually receive for distributing the collective investment schemes of the investors concerned.

Rebates:

In the case of distribution activity in or from Switzerland, the Management Company and its agents may, upon request, pay rebates directly to investors. The purpose of rebates is to reduce the fees or costs incurred by the investor in question.

Rebates are permitted provided that:

- they are paid from fees received by the Management Company and therefore do not represent an additional charge on the fund assets;
- they are granted on the basis of objective criteria;

- all investors who meet the objective criteria and demand rebates are also granted these within the same timeframe and to the same extent.

The objective criteria for the granting of rebates by the Management Company are:

- the volume subscribed by the investor or the total volume they hold in the collective investment scheme or, where applicable, in the product range of the promoter;

- the amount of the fees generated by the investor;

- the investment behaviour shown by the investor (e.g. expected investment period);

- the investor's willingness to provide support in the launch phase of a collective investment scheme.

At the request of the investor, the Management Company must disclose the amounts of such rebates free of charge.

5. Place of Performance and Jurisdiction

Both the place of performance and the place of jurisdiction for Shares in the Company's Sub-Funds offered or distributed or from Switzerland shall be the seat of the Swiss representative.
