CM-CIC CONVERTIBLES EURO
ISIN Code Share Class RD: FR0013481074
Sub-fund of the 'CM-CIC SICAV' SICAV
CREDIT MUTUEL ASSET MANAGEMENT
Crédit Mutuel Alliance Fédérale

OBJECTIVES AND INVESTMENT POLICY:

This UCITS, which is a sub-fund of a SICAV, aims to achieve an annual performance, net of fees, that exceeds that of its benchmark index, EXANE ECI ZONE EURO, over the recommended investment period.

The UCITS portfolio composition may differ significantly from the benchmark index.

The UCITS is actively managed and invests in negotiable debt instruments (bonds or convertible or exchangeable notes), in warrants (financial contracts under which the UCITS can purchase shares at a later date and generally at a fixed price) and in other financial instruments which can be converted into shares issued by companies based in Europe or in other developed countries worldwide.

The UCITS will purchase negotiable debt instruments denominated in euros, but may also purchase debt instruments denominated in currencies other than the euro.

It complies with the following ranges of net exposure by asset class:

From 0% to 100% invested in convertible or exchangeable bonds issued by the public or private sector, in all geographical areas (including emerging markets), in all rating categories or unrated, as assessed by the portfolio management company or by the rating agencies.

From 0% to 100% in sovereign fixed income instruments and securities issued by the public or private sector, in all geographical areas (including emerging markets), in all rating categories or unrated, as assessed by the portfolio management company or by the rating agencies.

From 0% to 100% invested in equity markets, of all geographical areas (including emerging markets), of all market capitalisations, and from all sectors. The UCITS may, in particular, be exposed to equities purchased directly, excluding conversions (20%).

From 0% to 10% exposure to currency risk.

It may also expose the fund to: - financial futures contracts or options and securities with embedded derivatives, used for hedging and/or exposure to equity risk, interest rate risk, credit risk and currency risk, which could lead to maximum total overexposure of 100% of net assets.

Allocation of distributable amounts: Total distribution.

Recommended investment period: over 5 years.

This UCITS may not be appropriate for investors who plan to withdraw their money within this period.

Subscription and redemption conditions:

Subscription and redemption orders are centralised each business day at 12:00 pm (CET) and executed on the basis of the net asset value calculated on that day.

The net asset value is calculated each business day on the basis of the closing prices, with the exception of days when the Paris stock exchange is closed (as per the Euronext SA calendar).

RISK AND REWARD PROFILE:

This UCITS is classified in category 4 because of its exposure to fixed income and equity markets, which can experience significant fluctuations.

Indeed, the net asset value can undergo variations due to the maturity of the securities, the sensitivity of the portfolio and the volatility of the equity market.

MEANING OF THIS INDICATOR:

This indicator measures the level of volatility of the UCITS and the risk to which your capital is exposed.

The historical data used to calculate this synthetic indicator cannot be considered a reliable indication of the future risk profile of the UCITS.

The risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the UCITS may shift over time.

Please note that the potential to make a higher gain is also associated with a high risk of loss. The '4' risk category does not guarantee your capital; the '1' risk category means your capital is exposed to low risk, but the opportunities for gains are limited. It does not mean a risk-free investment.

MATERIAL RISKS NOT TAKEN INTO ACCOUNT IN THE INDICATOR:

Credit risk: In the event of a deterioration in the quality of issuers or if the issuer is no longer able to meet its commitments at maturity, the value of such securities may fall. High yield securities present an increased risk of default and may vary more widely.

Counterparty risk: Counterparty risk measures the risk of loss if a counterparty defaults and is unable to meet its contractual obligations.

Risk linked to the impact of techniques such as the use of derivatives: The use of derivatives may lead to a decrease in net asset value and generate significant fluctuations of the net asset value in the event of exposure contrary to market developments.

This risk may result in a fall of the net asset value.
