Risk and reward profile

1	2	3	4	5	6	7
---	---	---	---	---	---	---

- Since any investment is by nature risky, its return (performance) is uncertain. The risk and reward profile of your investment is reflected by a synthetic indicator which ranks the sub-fund over a risk/return scale from the lowest (1) to the highest (7) risk category.
- This risk/return level is calculated on the basis of changes in the value of the portfolio (volatility) recorded over the last 5 years (or on the basis of simulations produced on the basis of an appropriate benchmark index if the sub-fund or class has existed for less than 5 years). It gives an indication of the sub-fund's potential performance and of your capital risk exposure, but it does not guarantee that the risk/reward profile currently published will remain unchanged.
- Historical data, such as those used to calculate the synthetic indicator, may not be a reliable indication of the sub-fund's future risk profile.
- The lowest risk/return category (level 1) does not mean a risk-free investment.
- The subfund's risk level reflects the following factor(s): equity investments have greater volatility and higher risk than investments in bonds and money market instruments. Emerging markets present a high degree of risk.
- The capital invested in this sub-fund is not covered by any guarantee or protection. You may therefore lose all or part of the capital invested in this sub-fund.

Certain risks are not (or not adequately) reflected in the risk and reward profile mentioned herein. Among these risks, the following risks could have a significant impact on the sub-fund's risk and return profile:

- **Credit risk:** Risk that a bond will lose all its value if the issuer of the bond is unable to repay its debt on the due date.
- **Liquidity risk:** Some financial securities may be impossible to sell quickly at a given instant or may have to be sold at a discount.
- **Counterparty risk:** The sub-fund can lose money as a result of the failure of a market player with which it does business.
- **Operational risk:** In any market, and in particular in emerging markets, the sub-fund may lose some or all of its money in the event of default in the custody of assets, fraud, corruption, political measures or any other adverse event.
- **Concentration risk:** Where the sub-fund concentrates its investments on one country (or one region or sector) that is affected by an adverse event, its value may fall.
- **Management risk:** Under abnormal market conditions, standard management techniques may be ineffective or unfavourable.
- **Derivatives risk** Some derivatives may increase the volatility of the sub-fund or expose the sub-fund to losses higher than the price of these derivatives.
