What is this product?

Type

The product is an undertaking for collective investment in transferable securities (UCITS, fund) in accordance with the Investment Fund Act 2011 (InvFG). The Fund is a portfolio of assets with no legal personality that is divided into equal units represented by securities and that is collectively owned by all unit-holders.

Term

The Fund was established for an indefinite period of time.

The Management Company may terminate the management of the Fund or merge the Fund with another fund, both in compliance with the applicable legal regulations (see the prospectus, section II, item 7). If the unit-holders redeem all units in the Fund, the Fund will also be terminated.

Objectives

ERSTE BOND EM GOVERNMENT is a bond fund. The Fund aims to achieve capital growth and/or continuous returns.

The unit category ERSTE BOND EM GOVERNMENT CZK D02 may in agreement with the Management Company be purchased for individual portfolio management mandates outside of Austria managed by portfolio managers belonging to Erste Group banking group, for investment funds managed by the Management Company or its subsidiaries and by unitholders who have agreements with distribution partners belonging to Erste Group banking group in place which allow them to acquire units free of inducement fee. There is no minimum (initial) investment volume. The unit certificate transactions are settled in CZK. No additional hedges are employed to cover currency risks versus the fund currency EUR. Therefore, there is the risk of currency losses.

In order to attain the investment objective, the Fund invests predominantly, in other words at least 51% of its assets, in EUR- and/or USD-denominated government bonds issued or guaranteed by emerging market governments; these bonds must be purchased directly, in other words not indirectly or directly through investment funds or through derivatives.

In addition, it may also purchase EUR- and/or USD-denominated bank bonds, primarily from issuers registered in emerging markets, and EUR- and/or USD-denominated (corporate) bonds from issuers that have considerable business interests in emerging markets; there are no restrictions with regard to the issuers' credit ratings (ratings ranging from the investment grade segment to the speculative grade segment).

Units in investment funds may comprise up to 10% of the fund assets.

Derivative financial instruments can be used as part of the investment strategy and for hedging purposes, and may comprise up to 49% of the fund assets.

The Fund employs an active investment policy. The assets are selected on a discretionary basis. The Fund is oriented towards the JPM EMBI Global Diversified EUR hedged index as a benchmark (index provider disclaimer: <https://www.erste-am.com/index-disclaimer>). The composition and performance of the Fund can deviate substantially or entirely in a positive or negative direction from that of the benchmark over the short term or long term. The discretionary power of the Management Company is not limited.

Detailed information on the eligible investments can be found in Article 3 of the Fund Rules or Section II, item 12 of the prospectus.

What are the risks and what could I get in return?

Risk indicator

The risk indicator assumes you will keep the product for at least 6 years.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level. Poor market conditions are unlikely to impact our capacity to pay you.

This product does not include any protection from future market performance so you could lose some or all of your investment.

Please note potential currency risk. If you receive payments in a different currency, the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

You do not have to make any further payments to cover losses.

In addition, there are material risks that are not taken into account in the summary risk indicator: credit, liquidity, operational, transfer, and custody risk as well as risk from the use of derivatives.

Comprehensive information on the risks of the Fund can be found in the prospectus, section II, item 12.

What happens if Erste Asset Management GmbH is unable to pay out?

The Fund is a portfolio of assets that is segregated from the assets of the Management Company. There is thus no risk of default in terms of the Management Company (for example in the event that it becomes insolvent). The unit-holders are joint owners of the assets of the Fund. The Fund is not subject to any legal or other deposit guarantee scheme.
