What is this product?

Type

The product is a share class of the sub-fund Franklin Flexible Alpha Bond Fund (the "Fund") which is part of Franklin Templeton Investment Funds, an open-ended investment company with variable capital (SICAV), qualifying as a UCITS.

Term

The Fund has no maturity date. The Fund could be closed under the conditions laid down in the current prospectus of the Fund.

Objectives

Investment Objective

The Fund, which pursues an actively managed investment strategy, aims to earn income and to increase the value of its investments over the medium to long term in excess of the FTSE 3-Month US Treasury Bill Index over a full market cycle (being a period of time that spans a full business and economic cycle, which may include periods of rising and declining interest rates).

Investment Policy

The Fund invests mainly directly or indirectly (through derivatives) in a wide range of debt securities of any maturity, duration or quality (including investment grade, low-rated, unrated securities and/or up to 10% of the Fund's net assets in securities in default) issued by governments, government-related entities and corporations located in any country. The Fund's portfolio may include high yield ("junk") bonds, distressed debt securities (securities of companies that are, or are about to be, involved in reorganisations, financial restructurings, or bankruptcy), convertible securities or contingent convertible securities (investments in contingent convertible securities will not exceed 5% of the Fund's net assets), mortgage and other asset-backed securities as well as credit-linked securities that derive their value from an index. The Fund can also invest in units of other mutual funds and in Mainland China through the Bond Connect or directly (each limited to 10% of assets).

The Fund also intends to regularly invest in currencies and currency related financial derivative instruments as a hedging technique or to implement a currency investment strategy.

In addition, the Fund may also purchase or sell mortgage-backed securities on a delayed delivery or forward commitment basis through the "to-be-announced" (TBA) market (limited to 50% of the Fund's net assets).

The Fund can use derivatives for hedging, efficient portfolio management and/or investment purposes.

The Fund may hold significant amounts of bank deposits, money market instruments or money market funds due to the use of derivatives or in order to achieve its investment goals and for treasury purposes.

The benchmark of the Fund is the Linked FTSE 3-Month US T-Bill Index. The benchmark has been selected because the target return of the Fund is to exceed the return of the benchmark. Although the Investment Manager refers to the benchmark for performance measurement purposes, the Fund is not obliged to hold any of the benchmark constituents and may indeed invest up to 100% of its net assets outside the Benchmark.

Share Class Policy

For the distribution share class shown in this document, dividend income is distributed to shareholders.

For this share class, the manager applies a portfolio hedge that is intended to minimize the currency risk between the currency of the share class (which is in a non-base currency) and the base currency of the Fund.

Processing of subscription and redemption orders

You may request the sale of your shares on any Dealing Day (as defined in the current prospectus of the Fund).

Intended retail investor

The Fund may appeal to investors looking to maximise their investment return with a combination of income and capital appreciation by obtaining exposure to a wide range of debt securities and derivatives and willing to hold their investment over the medium to long term for a minimum period of 3 to 5 years. The Fund is suitable for investors who have an some knowledge and/or experience of financial markets with the understanding that they may not get back the full amount invested in the Fund.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets.

We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact the capacity to pay you.

Be aware of currency risk. In some circumstances, you may receive payment in a different currency, so that the final return you get may depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

These amounts depend on how much you invest, how long you hold the product and how well the product does.
