#### Risk and Reward Profile

- The risk category above is not a measure of capital loss or gains, but of how significant the rises and falls in the Share Class price have been historically.
- For example a share class whose price has experienced significant rises and falls will be in a higher risk category, whereas, a share class whose price has experienced less significant rises and falls will be in a lower risk category.
- The lowest risk category does not mean a risk free investment.
- As the Share Class risk category has been calculated using historical data, it may not be a reliable indication of the Share Class future risk profile.
- The Share Class is in risk category 6 as its price has experienced very significant rises and falls historically.
- Please note that the Share Class risk category may change in the future.

#### Other Risks

- The value of investments, and income from them, can go down as well as up and you may not get back the full amount you invested.
- Shares of companies are generally considered high risk investments, and may result in fluctuations of the value of the Fund due to external factors.
- The Fund invests in a limited number of holdings and is less diversified, and therefore this may result in large fluctuations of the value of the Fund.
- The Fund may use derivatives (complex instruments) in an attempt to reduce the overall risk of its investments or reduce the costs of investing, although this may not be achieved.
- A more detailed description of risk factors that apply to this Fund is set out in Section 8 of the Prospectus.
