Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

- The lowest category does not mean 'no risk'.
- The Fund is in this category due to the nature of its investments and previous levels of volatility (how much the value of the Fund rises and falls).
- Market and exchange rate movements can cause the value of an investment to fall as well as rise, and you may get back less than originally invested, even if the share class is hedged against the main currency of the Fund.
- The value of income payments will fluctuate.
