2. What are the risks and what could I get in return?

Risk indicator

The risk indicator assumes you keep the product for 5 years.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 2 out of 7, which is a low risk class.

This rates the potential losses from future performance at a low level. Poor market conditions are very unlikely to impact our capacity to pay you.

Notice for investors whose domestic currency differs from the fund currency EUR: Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

You do not have to provide any further payments to compensate for losses (no additional payment liability).

Key risks that are not included in the summary risk indicator are, for example: credit risk, liquidity risk, transfer risk, custody risk, operational risk and the risk associated with the use of derivatives.

For detailed information on the fund's risks, please refer to the prospectus (Part II, item 14).

This product does not include any protection from future market performance so you could lose some or all of your investment.
