Risk and Reward Profile

The risk and reward indicator

The risk category was calculated using simulated historical performance data and may not be a reliable indicator of the fund's future risk profile.

The fund's risk category is not guaranteed to remain fixed and may change over time.

A fund in the lowest category does not mean a risk-free investment.

The fund is in this category because it can take higher risks in search of higher rewards and its price may rise and fall accordingly.

Other particular risks

Credit risk / debt securities: A security issuer may not be able to meet its obligations to make timely payments of interest and principal. This will affect the credit rating of those securities.

Financial techniques / derivatives: The fund may use financial derivative instruments as part of the investment process. There is no guarantee that they will deliver the expected results.

Capital risk / capital erosion: The fund is obliged to make regular fixed distributions to investors and, if its income is insufficient to cover these payments, these payments may reduce the fund's capital.

Credit risk / non-investment grade: Non-investment grade securities will generally pay higher yields than more highly rated securities but will be subject to greater market, credit and default risk.

Operational risk / third parties: The fund's operations depend on third parties and it may suffer disruption or loss in the event of their failure.
