Investment policy

The fund is actively managed and invests in money market instruments (at least rated investment grade as measured by Standard & Poor's or any equivalent grade of other credit rating agencies in addition to receiving a favourable assessment of their credit quality pursuant to the manager's internal credit quality assessment procedure) that are denominated in US Dollar and issued by government, government agencies and companies worldwide provided that

The fund does not have a target benchmark. The fund's performance should be compared against the ICE BofA Merrill Lynch US Treasury Bill (0-3m) index. The comparator benchmark is only included for performance comparison purposes and does not determine how the Investment Manager invests the fund's assets. The fund's investment universe is expected to overlap materially with the components of the comparator benchmark. The Investment Manager invests on a discretionary basis and there are no restrictions on the extent to which the Fund's portfolio and performance may deviate from the comparator benchmark. Risk and reward profile

The risk and reward indicator

The risk category was calculated using historical performance data and may not be a reliable indicator of the fund's future risk profile.

The fund's risk category is not guaranteed to remain fixed and may change over time.

A fund in the lowest category does not mean a risk-free investment.

The fund is in this category because it seeks to provide rewards whilst limiting price volatility.

Risk factors

Capital risk / Negative yields: The fund may lose value when interest rates are very low or negative.

Concentration risk: The fund may be concentrated in a limited number of geographical regions, industry sectors, markets and/or individual positions. This may result in large changes in the value of the fund, both up or down.

Counterparty risk / money market & deposit: The fund may invest extensively in deposits. The fund may lose value if a deposit institution or the issuer of a money market instrument goes out of business.

Credit risk: A decline in the financial health of an issuer could cause the value of its bonds to fall or become worthless.

Currency risk: The fund may lose value as a result of movements in foreign exchange rates.

Interest rate risk: The fund may lose value as a direct result of interest rate changes.

Liquidity risk: In difficult market conditions, the fund may not be able to sell a security for full value or at all. This could affect performance and could cause the fund to defer or suspend redemptions of its shares.

Operational risk: Operational processes, including those related to the safekeeping of assets, may fail. This may result in losses to the fund.

Performance risk: Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro economic environment, investment objectives may become more difficult to achieve.

IBOR: The transition of the financial markets away from the use of interbank offered rates (IBORs) to alternative reference rates may impact the valuation of certain holdings and disrupt liquidity in certain instruments. This may impact the investment performance of the fund.

Derivatives risk: Derivatives may be used to manage the portfolio efficiently. A derivative may not perform as expected, may create losses greater than the cost of the derivative and may result in losses to the fund.
