Important features:

The fund invests in shares, bonds and money market instruments. The equities portion is between 35% and 65%. With regard to portfolio composition, the selection of stocks and the associated weightings are focused on companies from the tailored benchmark index.* The portfolio composition may deviate considerably from this benchmark index.

The investment policy is to outperform the benchmark index. The Asset Manager may at any time deviate – significantly or insignificantly, positively or negatively – from the benchmark

index by actively overweighting or underweighting individual securities and sectors based on market conditions and risk assessments.

Derivatives may be used for achieving the investment objective.

Fund units will be issued or redeemed basically on any bank business day in Luxembourg.

Earnings and profits of the unit class are not distributed, but reinvested.

Risk and reward profile

The historical data used for calculating the risk and profit category cannot serve as a reliable indicator of the future risk profile.

The risk and profit category shown may very well undergo changes. Assignment to a category may change over time.

The lowest risk category cannot be equated with a risk-free investment.

Reasons for being assigned to the risk and profit category:

- Yield curve
- Interest-rate premium
- Price fluctuations in the share market and company-specific price fluctuations
- Foreign currency risks

There is no capital guarantee and no capital protection.

Further risks that are essential for the fund and not adequately covered by the indicator above:

- Credit risks, because substantial investments are made in interest-bearing securities where repayment default is possible.
- Operational risks in connection with the use of derivative instruments and other financial techniques for steering risk exposure with respect to base assets.
